"Information Technology Year 1982"
Possibly the most unlikely words ever to start an evolution.

Baker's IT revolution got underway at the weekend.

IT Year campaign launch

by Boris Sedacca
THE government's awareness programme for Information Technology Year has begun with a full-page advertising campaign in the national newspapers signed at the general public.

The campaign kicked off with an advertisement telling the public they can be consulted automatically by their houses over the telephone to report a roof leak after hearing a weather forecast, and give the house permission to ring a roofing company.

The launch of Information Technology Year 1982 has followed on from the International Year of the Disabled with promises of financial aid from the Department of Industry estimated at £2 million to manufacturers of special aids for the disabled.

Funding has previously been provided by the Manpower Services Commission and the Department of Health and Social Security but now the IT82 organisers are looking to the DoI to play a more active role.

Rates to stay as computer snags loom

by our Parliamentary Correspondent
COMPLEXITIES of a new computer system seem certain to prevent an early replacement for local authority rates.

Environment Secretary Michael Heseltine has been considering a local sales tax or local income tax to replace the outdated rating structure, but has been forced to accept 1987-8 as the earliest date for their introduction. The abolition of rates was promised in the Conservative Party manifesto at the last General Election.

A Green Paper issued before Christmas outlined the difficulties of moving to a new system. Heseltine has asked for comments on the paper, which is a discussion document, by March 31.

In one type of sales tax considered by the Green Paper, a link with VAT, the hold-up was found to be the bottlenecks at the VAT computer centre in Southampton.

The centre consists almost entirely of outdated ICL System 4s. Early last year the government ordered three 2966 mainframes to replace them, but changing over involves extensive re-programming. The VAT authorities have told the Department of Environment that the introduction of a sales tax cannot be contemplated until the new systems are fully operational.

The other version of local sales tax would require local authorities to set up their own tax administrations, which would almost certainly need to be computer-based. This would require a great deal of detailed planning and it would be unlikely that these could be completed much earlier than five years from a decision to proceed.

A local sales tax would in any case imply restrictions on local authorities' freedom to make frequent changes of rate, because any rate change would cause problems for businesses.

If local sales tax accounting were to be integrated with VAT accounting, businesses which used the VAT retail schemes would have to carry out accounting adjustments or possibly an extensive stock-taking.

Large traders with computer-based accounts, such as the major retailing chains, would have to carry out re-programming, as would other concerns which produced all their accounts from a single central source.

The government concluded that among the leading options for replacement of domestic rates, a local sales tax would cause local authorities the greatest difficulties for stable financial planning.

The time needed was also a drawback in going for a form of local income tax, the Green Paper made clear.

The introduction of local income tax would require local authorities to set up their own tax administrations, which would almost certainly need to be computer-based.

The time needed was also a drawback in going for a form of local income tax, the Green Paper made clear.

The introduction of local income tax would require local authorities to set up their own tax administrations, which would almost certainly need to be computer-based.

HESELTINE... Election promise.

come tax integrated with the national tax system would require extensive changes in the design of the computerised PAYE system.

The time needed both to introduce local income tax and to computerise PAYE would inevitably be greater than for either alone, and there would be a high degree of risk involved in trying to do both at once.

It would therefore be a question of suspending computerisation of PAYE to introduce local income tax on a manual basis or postponing local income tax until computerisation was complete.

UK goes to market in Dubai

HUGE markets for UK computer exports are in prospect in the Middle East, with rapid growth already taking place.

Confirmation came before Christmas at the Gulf Computer Exhibition and Conference in the Dubai International Trade Centre, the first events of their kind in the region. They were backed by Computer Weekly and its new journal Middle East Computing.

UK exports of computer equipment to the Middle East for 1980 were £26 million, according to government trade statistics, and constituted the major part of the estimated £60 million non-weapon DP systems imported into the region from around the world.

This figure can be multiplied several times when management contracts, training, software supply and other services are included.

Dubai was the scene of the first venture overseas by the new British Information Technology Export Organisation, dubbed ExportIT. It has been set up with a grant from the Department of Industry and director Bill Wells visited the Gulf Computer Exhibition just three weeks after officially taking up his post.

On show from the UK at the Gulf Computer Exhibition were Selcoo, Systime, Rascal-Milgo, the NCC and Trestel among others. ICL chose the occasion to launch its Perq into the Middle East.

Companies claiming to have booked business at the exhibition included Systime with a £50,000 order, DHL which says it sold five word processors off the stand, and Alredale Air Conditioning which says it concluded orders worth £25,000.

NEWS BRIEF

£400,000 ICL profit

SHAREHOLDERS of ICL have authorised the company to increase its share capital so that management can go ahead with a rights issue which is expected to raise over £32 million. Initial indications suggest the issue will be taken up in full, putting the company on the first rung of its climb back to full financial health.

The 1980-81 accounts issued with the results of the shareholders' meeting show that in the second half of 1981 ICL made a trading profit of £400,000 before interest charges.

DEC price cuts

DIGITAL Equipment has announced a 25% price cut on disc drives and an additional 10% reduction to "non-profit institutions." The reductions have been made in response to competition from outside original equipment manufacturers of disc drives and memories selling into the DEC market.

Telemail trial

BRITISH Telecom is running a limited trial of GTE Telenet's Telemail electronic mailbox system. Later this year a decision will be made on whether to offer a service based on Telemail in addition to the similar service BT is marketing with Dialcom from next month.

15% rise

PROGRAM product prices are likely to rise by a steep 15% for IBM users following an announcement from the US of a price review to take full effect in April. The rises hit hardest in large-machine products like IMS/VS. Newer products and those which have been restructured recently are excepted, including all 4300 processors, 3081 processors, Displaywriter.

HUGHES... CBE for services to exports.

Logica chief 'singled out' in Honours List

by David Crayor
INFORMATION technology suppliers have got short shrift in the New Year Honours List, with only Philip Hughes, chairman of Logica Holdings, singled out for an award. Hughes has a CBE for services to exports.

Hughes agreed that it was "very odd" that he should be the only prominent figure in the industry to appear on the list. There is "no reason why I should be singled out," he said.

But Logica has consistently had a high proportion of its business outside the UK, currently nearly half of turnover.

The last time he made the calculation, Hughes reckoned that Logica accounted for 20 to 25% of all computer service exports from the UK. Logica Holdings, which is part owned by the government through the National Enterprise Board, had turnover of just over £15 million in 1980.

Although its operating profit fell to £0.68 million, it was the company's success in its overseas operations which enabled it to increase turnover by 25% in the year.

Logica has expressed its belief that the US market, where the company had significant growth in the recent past, offers the greatest potential for future expansion.

In 1981 Logica concluded a merger of its US subsidiary and Freyberg Systems Associates, a professional services company.

Purchase new and used DEC drives from a company whose reputation is based on positive performance and unquestioned integrity.

If you're a DEC user, you can acquire DEC-maintained disk storage at large cost savings through a special program of System Industries Trade & Exchange (SITE). SITE is a UK company whose reputation is based on positive performance and unquestioned integrity. ANY CUSTOMER BUYING USED DEC EQUIPMENT FROM SITE RECEIVES THE SAME PROFESSIONAL COURTESIES AS ONE WHO BUYS A NEW DISK OR TAPES/STORAGE SYSTEM FROM SYSTEM INDUSTRIES.

In keeping with System Industries' reputation for sound and ethical business practices, the company stands behind all SITE transactions. We invite you to contact us for names of satisfied customers.

For more details concerning specific inventory and pricing, please contact: Sarah Haywood, System Industries Trade & Exchange, 11/12 Kings (0462) 5077 or see Market Place for details of equipment available now.

equipment until it is successfully installed. Site is part of a \$60-million a year company whose reputation is based on positive performance and unquestioned integrity. ANY CUSTOMER BUYING USED DEC EQUIPMENT FROM SITE RECEIVES THE SAME PROFESSIONAL COURTESIES AS ONE WHO BUYS A NEW DISK OR TAPES/STORAGE SYSTEM FROM SYSTEM INDUSTRIES.

In keeping with System Industries' reputation for sound and ethical business practices, the company stands behind all SITE transactions. We invite you to contact us for names of satisfied customers.

Key role emerges for IBM 8100 comms processor

by Boris Sedacca
IBM's communications-oriented 8100 processor is beginning to reveal itself as a central element in the company's Distributed Office Systems strategy.

At the heart of this is a program running on the 8100, the Distributed Office System Facility (DOSF), providing local computing and word processing functions.

Under IBM's old divisional structure, the 8100 was a Data Processing Division (DPD) product, dependent on the DPD's cash effort. IBM's other major computer division, the General Systems Division (GSD), was better equipped to sell smaller machines like the size of the 8100, while the DPD preferred to concentrate on mainframes.

Shortly after the reorganisation, IBM announced a product from the old DPD stable, the 4321, which inherited the role of the 8100, because the 4321 is clearly aimed at the same customers as was the 8100 originally.

Although the 4321 has more than the 8100 for straight-forward data processing workloads at remote sites, the 8100 has better local communications facilities and its Cobol is compatible with Cobol on the larger IBM mainframes running under the MVS operating system, while Cobol under the 4300 Series DOS/VSE is not.

The Distributed Office System Facility which runs on the 8100 is compatible with IBM's existing 3730 Distributed Office Communication System unit allows users to use the same screens and files, but with an expanded filing capacity.

Another IBM program product, the Distributed Office Support System (DISOSS), adds communications features to DOSF, allowing DOSF/8100 and 3730 systems to communicate with each other through a central host mainframe and to create, maintain and share central files.

It also allows documents to be passed electronically through the system using an existing IBM program product, Storage and Information Retrieval System (STAIRS), and documents may be created and manipulated using a Document Composition Facility (DCF).

A Document Interchange Facility (DIF) provides high-level access between the 8100 (or 3730) and document formatting facilities on the host.

These strategic software products provide an indication of IBM's future plans for office automation in general and for the 8100 in particular, with IBM's System Network Architecture (SNA) as the basic discipline.

IBM has also found a pioneering user for this strategy in Europe - the Norwegian equivalent of the British National Oil Corporation, Statoil.

Statoil has 12 IBM 8100s installed currently and plans to have 22 by mid-1982 in its ambitious office automation project. All the equipment will be rented.

The DISOSS project was started in late 1980 but only began running in May 1981 because of problems experienced with the standard IBM package release. The package runs under IBM's Information Management System (IMS)/Virtual Telecommunication Access Method (VTAM) and Statoil had difficulty in co-ordinating the appropriate skills as it was one of the first DISOSS users.

Statoil expects to derive a number of tangible benefits from the system. Heavy typing is being resulting from the occasional large project will be able to be distributed informally between the text co-ordinators assigned to each 8100. It will also help in contract negotiations when drafts need re-typing.

However, some problems still have to be ironed out. Some Statoil offices are too small to make full use of an 8100.

Another problem is that of text interchange to non-IBM systems, particularly in the case of outside contractors using their own text processing systems.

CHISHOLM... Bidding with confidence.

UK consortium could scoop Nato contract

by Claire Goodling
NATO's plans for an early warning defence system could represent several hundred million pounds of business to the four British companies which have banded together to bid for the contract.

The system is estimated to be worth £300-£400 million in software alone, and a total of £1,000 million over the next ten years.

British Defence Software (BDS), a pooling of skills between SPL, CAP, Leasco and ICL, is an attempt to increase the British slice of the Nato cake. In the past, large Nato contracts have gone to US corporations (also operating in consortia because of the size of the project), particularly in the hardware merchants like Hughes Aircraft.

Now the emphasis is changing, and software is playing a larger part in putting together such systems. This gives a chance to small organisations, individually too weak to stand a chance, to band together and bid for part of the contract.

Software is now the key of Nato's Air Command and Control System (ACCS), designed to be a sophisticated data network which will keep all the ground forces of Nato in touch with one another. The project is almost certain to be written in Ada, the new real time language defined by the US Department of Defence for military applications.

CAP and SPL both have experience in Ada, and John Chisholm, CAP's representative on BDS, says that the group is somewhat ahead of the game already. On a project of this size there is a long way to go before the first contract, but, says Chisholm, "we wouldn't be bidding if we weren't confident."

ACCS itself is only part of a larger Nato communications scheme, the Joint Technical Information Distribution System (JTIDS). Described by one avionics expert as a "databus in the sky", a sort of ring main by which every component of the forces is connected, the JTIDS will share information gathered from ACCS and the Airborne Warning and Control System (AWACS).

At present each country has its own Air Defence Ground Environment, and any intelligence on troop or air force movements is not automatically shared.

"The big issue in today's defence environment is command control," explained Chisholm. "You can have the best weapons money can buy but if you don't know what to do with them, they're useless."

His attitude to ACCS is businesslike: "It's no difference from any other computer system, but the problems are magnified: just the consequences of your mistakes are that much greater."

The partnership of BDS will go forward as the British representative to join a larger and international consortium, provisionally referred to as the Nato Defence Consortium (NADCO). This is likely to be made up of European representatives of similar status to BDS, such as Cap-Gemini-Sogefi of France.

Even so, there is no certainty that the European consortium will win against the hardware merchants of the US which have traditionally dominated in such projects.

Leasco and ICL are contributing to BDS their wide experience to defence and military applications. While the winning software consortium will have the flood choice of hardware, ICL's presence on BDS will not necessarily dictate ICL kit.

Scicon to replace a Digital vintage

by Donald Kennett
SCICON is to make a replacement for the 1960s vintage Digital Equipment DX-11, a device which allows DEC users to access facilities based on IBM mainframes.

The replacement, called the KDX-11, is a microprocessor-based device which will enable DEC users to make connections to IBM hosts supporting networks based on IBM's Systems Network Architecture, instead of only the more limited bi-synchronous protocol links supported by the DX-11.

It will also end users' uncertainty of the DX-11's future, since its age and its hard-wired design make it difficult to debug and maintain.

The KDX-11 was developed by DEC's communications specialist team in Andover, South Eastern France at the request of Scicon, which needs such a device to support its range of software products aimed at DEC users wanting to work with IBM mainframes.

KDX-11 will be available from April at about £15,000. Scicon has an exclusive licence for the first 30 units sold in the UK and the rest of Europe, and is negotiating a licence for the US. Many DX-11 users are US defence organisations.

The Scicon software products dependent on the device run on DEC PDP-11s and VAX-11s. They now enable DEC users to link networks based on DECnet to IBM SNA hosts via the IBM block-multiplexed Channel interface, the fastest and most efficient means of communicating with an IBM mainframe.

D'Agapeyeff... "Rules can be changed."

'Britain could lose the expert systems market to Japanese'

by David Craver
THE shadow of the Japanese looms over yet another rapidly expanding field in the computer industry - expert systems. And unless the UK is willing to devote significant resources to develop the emerging technology, the initiative in what is predicted soon to be a major industry will be lost, according to speakers at a management tutorial sponsored by the British Computer Society.

In one of the more controversial presentations of the day, Alex d'Agapeyeff, ex-chairman of software house CAP-CPD and now an independent consultant, said the reason expert systems were suddenly in the ascendancy was "perhaps because of the influence of Japan on backward countries like our own."

He said the Japanese, who have made expert systems central to their development of fifth generation computers, were putting in \$500 million to \$1 billion as seedcorn money.

It is not so much financial resources which are necessary, but a change in attitudes and skills to make good use of new techniques, according to Sir Iwan Maddock, principal of Sir Edmund Hall, Oxford.

The problem is how to develop expert systems without undermining the role of experts, Maddock said. "It is a dangerous fallacy to think we will consult a VDU to diagnose our ills," he added, but such systems will extend the range of our human specialists.

Max Bramer, a lecturer at the Open University, defined an expert system as "embodying organised knowledge about some area of human expertise which enables it to perform as a skilful and cost-effective consultant."

Expert systems, which are a function of software rather than hardware, can make judgments on the basis of data supplied to them.

There are over 40 high performance expert systems now working, mostly in the US, he said, but very few as yet regularly in use in the field. He called on the UK educational, scientific, and business community to develop expert systems, because "the Japanese certainly are."

The current algorithmic approach to programming, which "pretends to be precise", was causing the programming of business applications to grind to a halt because of their complexity, according to d'Agapeyeff.

But the advent of the microcomputer had begun to eliminate the consideration of machine efficiency in the cost/performance equation, he said. Expert, or knowledge-based, systems turned most programming ideas on their heads, with the heuristic, or rule of thumb, approach giving the end-user a much closer interaction with the computer.

"Rules can be changed if you don't like them," d'Agapeyeff said.

Watchdog M. £200 million in loan guarantee to ICL

by our Parliamentary Correspondent
CRITICISM of the government's decision to support ICL with a free £200 million bank loan guarantee over the next two years has come from the Commons' watchdog committee on public spending.

The committee asked whether the Department of Industry would receive any direct financial return for its guarantee to ICL and it had been informed that the government was not making any charge because in ICL's financial position that would be to take away with one hand what it was giving with the other.

The select committee disputed this decision. It said it appeared in them that the giving of a guarantee of this sort provided a valuable financial benefit to the company which should thereby be able to negotiate significantly reduced interest rates on overdraft facilities from its bankers.

The select committee said it was surprised that the DoI considered that no charge was appropriate, especially as a feature of an effective guarantee was always likely to be that cover was given for a higher amount and longer period than the company should need to overcome its immediate cash crisis.

It recommended that the DoI should review its policy relating to guarantees of this nature. In future cases it should consider some form of charge which might take the form of a deferred payment that could be reduced if the company was able to dispense with the guarantee, or any part of it, at an earlier date than agreed.

The select committee reported that it accepted that the decision to provide a guarantee for a limited period was an appropriate means of dealing with ICL's cash flow difficulties. And it trusted that the DoI's intention to design limits that would avoid the need for any call on the guarantee would prove successful in practice.

The DoI conditions include a promise to watch closely ICL's review of longer term business opportunities including its association with other companies which might strengthen its commercial position, assist with the cost of research and development and secure the interests of its customer base.

The Select Committee noted that although the new management team dropped partnership negotiations in train in May 1981, it remained part of the new management's strategy to seek consolidating ICL's commercial position.

The committee agreed with the Department of Industry that it would be undesirable to allow a partner to pick and choose the most profitable aspects of ICL's business for a joint venture. The substantial support in the past ICL had received from public funds directly and through preferential purchasing must remain an important factor in assessing partnership proposals.

Time-lag on new product complaint

by Robert Parry
THE time-lag between manufacturers' talk of new products and their actual appearance can be frustrating for users. An advertisement played by Compuskill, of Romford in Essex, in the July 1981 issue of Personal Computer World, offered among other things paddles and a colour encoder for the Acorn Atom microcomputer.

When a number of the public found that the encoder and paddles would not be available for two months, he complained to the Advertising Standards Authority.

Compuskill told the ASA that after it had supplied the advertisement proved unreliable and were withdrawn for further tests. The publishers were asked to amend or withdraw the advertisement, but it appeared in its original form. The ASA was happy with the explanation, though the complaint was neither upheld nor dismissed.

Nick Yates, one of Compuskill's partners, said, "It hasn't caused us any problems."

Digital's Industry Standard in Lab. Computing is now better and cheaper

Come and learn how we've improved on an already outstanding story.

MINC*
Digital's small computers for laboratory research are a family of easily used, high performance compatible systems for data collection, data analysis, instrument control, graphing, data displays and other essential research functions.
*MINC-Modular Instrument Computer.

ENHANCED
This well-established family has been significantly enhanced with new graphics additional I/O modules, floating point hardware and more powerful software. MINC continues to set the standard for easy-to-use yet powerful laboratory computers.

NEW PRICES
MINC prices are now as much as 30% less than before. Come to a seminar to see how our high performance systems are now even better value.

DIGITAL
The company which has installed more computers in laboratories worldwide than any other manufacturer.

SEE THE ENHANCEMENTS IN ACTION

Statoil's administrative workload from large projects such as the above Statoil Nord platform will be better shared with IBM's distributed office system.

France wins Xerox office automation factory

by Jack Gee
FRANCE has placed the Xerox plant at Neuville, refurbishing photocopiers, in the hands of the post to win the favour of Xerox for a £10 million investment in the company's first European office automation equipment factory.

Production will begin at an existing Xerox plant in Neuville-en-Ferrand, near Lille, cohabiting North France to provide a launching pad to compete for major slices of the European market.

Xerox already has 680 workers at Neuville refurbishing photocopiers. They will be getting manufacturing electronic typewriters, scanners for Xerox's Sharp disk and the Diablo terminals this spring.

Following Xerox's investment, employment will be maintained at the Neuville factory and more jobs could be created.

In the medium term, Xerox plans to export 60 per cent of production to Western and Eastern Europe.

Fired for running his own business at work

by Andrew Thomas
AN analyst has lost his claim for unfair dismissal following the discovery of unauthorised programs and data on his employer's IBM 3033.

In August 1980, three mystery programs and data files were discovered in the library allocated to senior programming staff at the Eagle Star Insurance Company's Cheltenham data centre. Further investigation revealed a program designed to aid the completion of football pool coupons. Senior systems analyst Michael Hayward was identified as the guilty party and subsequently dismissed.

When the evidence for Eagle Star was given, it transpired that the reason for Hayward's dismissal was rather more than the pools program. His programs and data files were run by management as a service for a catering company run by Hayward's girlfriend. Hayward is a director and company secretary of the operation.

Between February and May 1980, the program had been run 43 times and another 25 times. Hayward claimed that the software had never been used for business and that all the catering company's accounting was done manually, although no evidence of this was produced at the hearing.

Hayward's main defence was that, shortly after his dismissal, an employee of Eagle Star had been discovered misusing computer resources but had only been suspended.

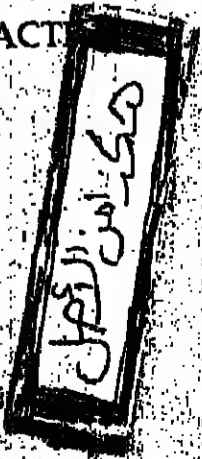

The company's view on this was that Hayward's offence was more serious because he was misappropriating computer resources for the benefit of his own business.

We change the way the world thinks

First licence won for Unix update

by Claire Guodong
ATCOMMERICAL software house in the City of London, CHS Computer Services, has stolen a march on other British systems specialists by getting the first licence for System III, the follow-up to Western Electric's successful operating system Unix.

Unix has been waiting in the wings to become the standard portable operating environment of the lighties. Western Electric's move to introduce its successor coincided with the US ruling that the telecommunications giant would now be allowed to sell software into the DP market.

System III has even more facilities than Unix and is likely to bring Western Electric a significant presence in the data processing market.

CDS will be selling source and binary licences to users in the UK, and is already getting orders and enquiries from a varied cross-section of users.

"People are beginning to find out what's going on," said CDS chairman David Sanderson. "They are discovering that binary licences are a cheap way of getting System III facilities."

"In the Digital Equipment market, where operating system licences are quite high in any case, it may well push out the DEC OS."

CDS took a commercial decision to follow the Unix route after some market research, and plans to offer applications as well as the actual licences for System III. At the moment the lack of applications software is the only thing hampering the Unix movement, which is already strong among OEM and systems suppliers.

System III is totally compatible with Unix, and is likely to help rather than split the movement as it will appeal to large organisations.

"A lot of people have been cautious about spending money with Western Electric," said Sanderson. "We are rather proud of being the first British software house to take the step with System III."

BOGOD
fied me."

by Maggie McLening
"MISUSE of computers" in developing countries has inspired Julian Bogod, ex-strategic marketing manager for ICL's international division, to set up a charity to promote computing in the Third World.

"What I saw horrified me and I decided to do something about it," he says.

The result is the newly-formed UK Council for Computing Development, for which he now works full-time as director. Bogod feels that a key factor for computing development overseas is to have government will and understanding behind computer projects, providing support in such areas as education.

"There is a tendency for the early stages to consist of private installations set up by multinational companies and staffed by expatriates. It's difficult to recruit local staff as they have no training," he comments.

As president of the British Computer Society in 1979-80, Bogod presented a paper in Mexico on computing development which also led him to contacts with the governments and private companies in Jamaica, Guyana, Nigeria, Singapore, Indonesia and Hong Kong.

Bogod sees the role of the UKCCD as advisory, and as the second National Seminar on Computer Use, sponsored recently in

Sri Lanka by the International Labour Organisation advocated carefully planned computing growth to avoid costly mistakes.

"The developing countries need help to enable them to take advantage of world-wide computing advancements. They should not try to re-invent the wheel," he said.

There will, however, be no financial support from British overseas aid funds.

Membership fees for the UKCCD are on a sliding scale, according to category and size of company, varying from £5 for an individual to £20,000 for government members and companies with more than 5,000 employees. According to Bogod, there are currently 80 individual members and 32 corporate, including ICL, the BCS, the NCC, Ferranti and British Telecom.

"Companies joining as industry members may expect 'growth in business opportunities overseas' and 'access to information about overseas markets', while commercial members may expect 'long-term improvement in economic efficiency', according to the UKCCD prospectus. In return they will be expected to share their technical expertise and resources with the Third World.

Hamburg, one of the European ports linked by the new data processing pilot system.

Pilot comms network links major European ports

by Philip Hunter
AFTER 10 years of development the major European ports have been linked by a pilot communications network. Its developers hope it will lead to a de facto world standard.

The pilot system enables members of the EVHA, the European Ports' Data Processing Association to tune in to a computer centre in Copenhagen by telex, intelligent terminal or teleprinter. Information on operations, and ship movements are available now and there will be a study on exchange of details of dangerous cargoes.

Most large ports of the European Communities and Spain subsidise EVHA and nine of them, including the Clyde Port Authority in Glasgow, are involved in the first working part of the exercise, the pilot network of ship move-

ments. The European Communities put up about £350,000 for this first phase, with EVHA supplying the remainder.

The exchange of hazardous cargo information will begin next year with the Port of London and Medway taking part. "The idea is to make this transfer of information easier," explains Robin Russell, managing director of the wholly owned subsidiary of Clydeport Authority, Clydeport Data Management.

He adds that ports now dispose of information once it is no longer of any use. The final system, expected in 1985, should enable ports receiving dangerous cargoes to know in advance when to expect them and the exact nature of the hazard.

The network will be able to handle several standard protocols

and be telex compatible as well as taking telephone lines.

The Copenhagen centre runs on an IBM 3033 and an Amdahl 470, switching between the two.

Software for the project is being written by a consortium of European companies led by ERNO of Germany with Kamsax of Denmark and KLM of Holland. A British member of the consortium decided to bid for the tender on its own - and ended up losing out altogether.

A parallel but independent project is in progress at EASI, the European Association for Shipping Informatics, a sister organisation of EVHA.

There is also an almost identical project in the US and the EEC is keen to have its network adopted as the world standard, Russell adds.

Additions to 5520 range

by Boris Sadacev
IBM has enhanced its recently launched small business computer, the 5520 Administrative System, and added new models to the range.

The enhancements include IBM 3270 SNA emulation for a 5253 display station. This provides support for handling host database information - and the ability to switch between 5520 and 3270 modes without terminating the suspended session. Information displayed in 3270 mode can be saved for use in 5520 text mode.

New models of the 5525 system unit - models 21, 31, 32 and 51 - are extensions of existing models 20, 30 and 50. The maximum number of 5253 display stations has been increased to eight on the model 21 from six on the model 20, and 15 on the model 32, from 12 on the model 30.

Models 31 and 51 will support 12 and 18 display stations respectively. Also announced is a wide-range version of the 5219 printer, the 5229.

NAS ousts IBM in major Asian coup

by Kevin Cahill
NATIONAL Advanced Systems, the American company which markets Hitachi-built plug compatible IBM mainframes, has notched up a major success in the biggest IBM installation in Asia, outside Japan.

The Hong Kong-based Hong Kong and Shanghai Bank, which is currently awaiting the outcome of a Monopolies Commission investigation into its bid for the Royal Bank of Scotland, was an exclusively IBM site until the recent announcement of the £2 million lease commitment to take a four Mbyte AS9000M. The machine, to be installed in September, is intended to complement the bank's two 3033s which are scheduled to reach their capacity limit by the end of this year.

The current 3033s are in the bank's back-up centre and the initial commitment includes a plan to upgrade the AS9000 to a 12 Mbyte 10 mips machine, the AS9000. This implies that the bank will look to the PCM machine to provide capacity for the foreseeable future and that IBM is no longer the leading supplier.

The NAS machine was ordered by the bank despite the fact that NAS has no office in Hong Kong, whereas IBM does have an office in the Colony.

In an effort to best off the NAS threat IBM offered a 3081 which was out there available in South-east Asia. John Strickland, the DP chief at the Hong Kong and Shanghai Bank, said the IBM machine had features "which were unsatisfactory from our point of view."

The bank's major online systems are intended for running on a uniprocessor and the 3081H is a very tightly coupled dual processing machine.

Another factor thought to have influenced the bank is that the NAS machine will support the OS/VSI operating system which the bank uses, whereas the 3081 only uses MVS.

The loss of the bank order is a blow for IBM which earlier in 1981 lost another site at Cathay Pacific Airlines to Sperry Univac.

The South-east Asian computer market, centred on Hong Kong, is reckoned to be one of the most promising growth areas in the world over the next few years.

SALES BRIEF

£200,000 system for arts centre

BARBICAN Arts and Conference Centre has ordered a £200,000 box office computer system from London-based Space-Time Systems.

The system is written in Fortran to run on a Digital Equipment PDP-11/44 under RSX-11 and will support 16 sales positions equipped with a VDU and ticket printer. It is to be installed in March.

Bank order

BARCLAYS Bank has ordered 45 Diablo 1640 receive-only daisy-wheel printers from Zygal Dynamics of Bicester for £112,000. They will be used with Apple microcomputers in its regional branches for word processing and statistics gathering.

Replacement

CITY-based insurance broker C. T. Bowring has ordered a £54,000 Redifusion R1800/30 office computer to take over claims documentation and batch entry work from an older Redifusion system.

NCR upgrade

CZECH car maker Skoda has upgraded the two NCR I-8200s at its UK subsidiary's offices to an I-9040, expanding the disc capacity from 40 Mbytes to 324 Mbytes, so as to add motor-cycle and agricultural equipment and spare inventories to its stock control system which previously only handled cars.

Research aid

THE Social Science Research Council has installed a £40,000 256 Kbyte Kode XL40 with a 10 Mbyte disc and five VDUs to provide offline data entry facilities for records of research contracts, grant applications and post-graduate training funds, which are transmitted over a dialled telephone connection to a bureau for processing.

Fire control

CLWYD-based remote data acquisition specialist Remdysq has won a second order for its year-old fire brigade command and control system, Commdsq. The £180,000 order from the Isle of Wight County Council is for a system with a master station containing a two Mbyte bubble memory and 10 outstations, which is due to replace existing call-out equipment by the autumn.

Custom built

THE UK's first custom-built geoelectric engineering fermentation plant, being built by US pharmaceutical company G. D. Searle at High Wycombe, is to be equipped with a £100,000 Keot K90S control system from process control specialists Brown Boveri, Kent.

First contract

COPE Allman subsidiary Counting House Computer Systems has won the first contract for its ITS integrated technical system, which is to play a central part in Teesside Polytechnic Computer Science department's pilot CAD training scheme, one of the first to be supported by the EEC Social Fund.

1982 COULD BE 365 DAYS OF DP DEADLINES.

WHY NOT SET JUST ONE DAY ASIDE TO SOLVE THEM?

1982 - another year and another set of problems for you to manage. But why not make this year different?

MSA, the world's leading financial application software company, offer you this opportunity - completely free of charge - to find out about some lasting solutions to your DP deadline problems.

Application solutions include General

Ledger/Financial Information and Control, Financial Forecasting and Modelling, Fixed Assets Accounting, Accounts Receivable, Accounts Payable, Supplies Inventory Control and Purchasing, Payroll and Personnel.

This is your chance to spend just one day thinking about the problems facing you in 1982 and some suitable solutions.

Olivetti well on target after first year as PCM

by Boris Sedacca
ITALY'S major office equipment manufacturer, Olivetti, closed its first full year in the IBM plug-compatible mainframes market well on target with a total of 55 systems installed in Europe.

The company has sold 37 IPL-manufactured machines targeted at the IBM 4300 series and 18 Hitachi machines, 13 of which are in the IBM 3033 power range and five competing with the 3081.

Olivetti had set itself a UK target of ten machines - comprising seven IPL machines and three Hitachi machines, one of which would be a 3081 equivalent - but now has 12 machines installed. According to Derek Lewis, managing director of Olivetti Computers (UK), four of these are built by Hitachi.

"Our brief was to establish a wide base of machines to complete Olivetti's product line, which would then put us in a position to rival IBM in Europe. Coupled with a background of the IEC wanting to end IBM's monopoly position in Europe, we found both the Italian government and the IEC very supportive."

"At the time of our entry into the PCM market in January 1980 the days of big profits were over,

though there are clearly still some margins to be made.

"If we were to continue only in the office automation market, our base would be gradually eroded by IBM's moves into the market. We were the last into the PCM market with a total product line and the return on smaller mainframes meant that we could not expect to make big profits," said Lewis.

Olivetti first expanded its operations into Spain, where no other PCMs were operating and where it already had a sizeable operation.

Lewis continued: "The UK was chosen as the first testbed for a European battleground. We decided to pick our management and sales team from people with a minimum of ten years' experience straight from IBM."

"I believe we are now second only to Andali in the number of machines installed, and ahead of the other PCMs."

Lewis rebutted suggestions that Hitachi had intended Olivetti to confine the sale of Hitachi machines to Italy. National Advanced Systems and the German chemicals group BASF also sell Hitachi machines in Europe, creating some embarrassing disruptions in the market for Hitachi.

LEWIS... "PCMs should not be fighting each other."

"There is no surprise element concerning Hitachi. Our contract with them contains a clause clearly stating that we could market their machines in Europe, the Middle East, South Africa, and Central and South America."

"A price fixing agreement or an agreement to split Europe between ourselves would be illegal, but although we investigated the possibility of a joint venture agreement with NAS this was not feasible because we operate differently."

Lewis added that he did not want a war with NAS because the real "enemy" was IBM.

Bad start for data encryption devices

by Boris Sedacca
THE market for data encryption devices has shown little growth and is expected to remain small, according to a report by the US market research firm International Resource Development.

Three years ago the promulgation of the National Bureau of Standards' Data Encryption Standard (DES), coded with the introduction of DES encryption equipment by major vendors such as IBM, had been expected to trigger a big movement towards their use by commercial and industrial users, says the report, entitled Data, Text and Voice Encryption.

But today, sales of IBM's 3945 and 3946 data encryption devices are reported by IRD as being "very disappointing". Eight semiconductor vendors have introduced DES chips or chip sets, actions which the report describes as "ridiculous, considering the very small number of devices which are required on the market, and the high cost of engineering new chips."

Dennis Poulget, one of the authors of the report, said: "If trends from the last three years continue, we see no reason to believe that encryption will take off."

Replying to IRD's contention that sales of its encryption devices have been disappointing, IBM stated: "Sales of the 3945 and 3946 have been consistent with market demand for encryption devices in general."

IBM also rebutted a recent report in The Times suggesting that it had deliberately not produced an unbreakable encryption algorithm for DES under pressure from the US National Security Agency.

A spokesman for IBM said: "In 1978, a US Senate select subcommittee on intelligence publicly issued a summary of a classified study stating that the NSA did not tamper with the design of IBM's algorithm in any way."

"IBM believes that the DES algorithm is adequate for all commercial purposes for which it is intended. To the best of our knowledge, no one has discovered any mathematical weakness in the DES algorithm."

He added: "Nor has anyone demonstrated any technically or economically feasible means to discover a DES key by exhaustion, that is by trying all possible key combinations."

NEWS BRIEF

Prestel worldwide sales deal

OVERSEAS marketing arrangements for Prestel have been streamlined following a deal with GEC to market the videotext service software world-wide.

Under the agreement, future enhancements to the UK Prestel public service will automatically become available to overseas purchasers through GEC.

Storage unit

THE Hobbit, a mini-cassette storage unit that acts like a floppy disc for Nascom systems, has been put on the market by Carmarthen-based Ikon Computer Products.

Over 51 Kbytes can be stored on each side of the tape in up to 69 files. Data is transferred at 600 bytes per second via one P10 port. The unboxed system costs £99.

Pilot service

COUNCIL for Educational Technology has launched a pilot teleconference service on its Prestel database. Software to load the teleconference automatically is to be available commercially early this year from Research Machines for its RML380Z, which is widely used in schools, after trials with 25 schools and colleges using the pilot service.

WP launch

S.WORD, a word processing system which incorporates full screen editing with arithmetic capability, has been launched by Wootton, Jeffreys and Partners.

The system runs on Prime and DEC machines, and is available either as a complete turnkey system, or as a fully supported software package.

Typelink release

A NEW release of the Typelink processing system has been announced by CTL, part of the Information Technology Ltd group. Licensed at £3,800 for the complete system, which runs on the CTL range of Series 8000 computers, Typelink offers the facility to interface automatically with the Reporter system, which enables selected information to be inserted into documents being processed.

SOFTWARE BRIEF

Pansophic and BOC team up

US supplier of system aids Pansophic has teamed up with one of the largest bureaux in the country, BOC Datasolve, of Sunbury-on-Thames, in an agreement which makes two of Pansophic's best known products, Panvalet and Easytrieve, available to Datasolve clients.

The Panvalet library storage system and the Easytrieve information retrieval and data management system are linked with T803, Datasolve's version of the IBM program development tool SPPL.

For investors

AN investment workstation for investors has been launched by US software publisher Lifeboat Associates. Lifeboat describes the product as a combination of communications and management tools which creates an "electronic portfolio". It is linked into the Dow Jones News and Information Retrieval Service so that the user's information stocks, bonds, options, stock splits and portfolio management can be updated automatically.

'Total package'

ONE of the most successful financial systems in the market has taken another step towards becoming what its vendors, RTZ Computer Systems, describe as a "total fixed asset management package". The Fascia system can now handle revisions on the values of fixed assets so that users can alter one factor in a class of assets and get an update on how the change affects current cost accounting figures.

Naked Pascal

A "SUPERSET" of the new proposed standard for the Pascal language has been introduced by Computer Automation for use on its Naked Minis. Computer Automation chose Pascal for the advantages it can offer in programming discipline. It runs under the OS4 and real time RTX operating systems.

WP program

A WORD processing program which can cope with text and data convergence is being launched by Microtrend of Harrogate. The Lexicon package can screen documents up to 200 characters wide, and can also cope with automatic horizontal scrolling, numeric tabbing and decimal point alignment. It can also convert Lexicon files to standard CP/M text file format.

DBMS for DEC

A NEW database management system for users of the popular Digital Equipment PDP-11 machine is being introduced into the UK by Pioneer Computer Systems, a software house based in Northampton. The DBMS, called User 11, is claimed to save 75% on existing programmer time in program maintenance and system development.

SOFTWARE FILE

IBM's short-cut for DP departments gives bureaux a new image

A BUREAU service doesn't spring to mind as the most modern, go-ahead and flexible tool available to the up-to-date DP person.

But IBM is offering its VSPC (Virtual Storage Personal Computing) service as a by-pass to busy DP departments which know exactly what they want but do not have the capacity for it. Or at the other end of the scale, to first-time users who are fairly sure of what they think they might want, but will probably want it patented another colour once they have it up and running.

The whole idea of VSPC is to make available a variety of skills and resources which a user would not normally have on call. Using VSPC, a "prototype" system can be developed and subsequently

evolved into what is actually required instead of pouring effort into a one-off project which turns out to be not quite right.

The idea is catching on to the degree that other competitors in the IBM bureau field are beginning to offer similar services as part of the new image of bureau services.

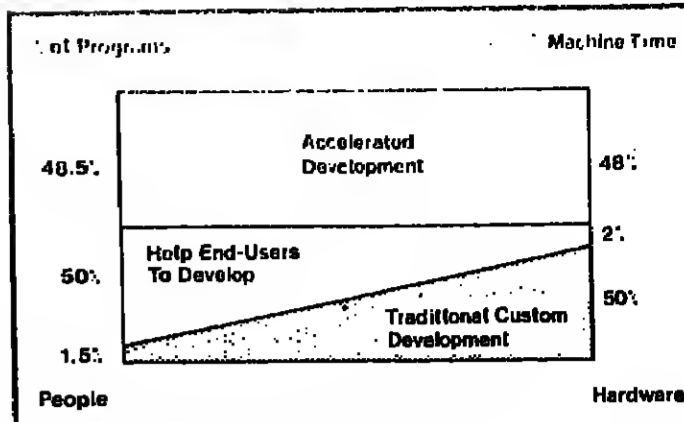

The service will run alongside existing in-house DP departments and aims to relieve load, by-pass the tailback of applications waiting to be developed, and get a system up and running without having to wait to amend designs.

Jeremy Rivers, the man behind the VSPC service run from IBM's Rayners Lane centre in North London, explained where VSPC fits into the DP scheme.

"We can go to DP departments and improve their productivity problems, he they due to lack of capacity, lack of facilities, staff, software, or whatever. Or we can go straight to the end-user and offer interim or even continuing solutions."

The reason behind the boom in the use of bureau services such as VSPC is the enormous increase in end-user demand. As more people expect to get more direct use of their company machine, DP resources become hopelessly overloaded.

IBM sees the simple solution as giving the end-user tools which will enable him to do the job himself without bothering - or even using the resources of - the in-house computing department.

IBM's view of the use of in-house DP resources.

The solution came partly from IBM's own in-house experience, and from research carried out in 1977. The interesting results are reproduced in the graph. They show that while the amount of everyday "bread and butter" processing has remained constant in terms of the machine time it occupies, an increasing amount of time has been given over to the execution of the "one-off" type of job demanded by end-users who need information and data.

The bureau service can also be used to set up complex projects high speed. One user, Motor Foods, needed a fast and sophisticated service in order to win a major contract with Express Dairies.

Deliveries to Express shops were now managed by a system of order processing which was written in six weeks, and has to cope with products at variable weights, or even which have to be prepared within 24 hours, and invoices sent with deliveries.

Théry tipped to head CII-Honeywell Bull

by Jack Gee
GERARD THERY, former head of France's telecommunications authority, is strongly tipped to become chairman of CII-Honeywell Bull following nationalisation by the French parliament, industrial sources said in Paris.

Théry would succeed Jean-Pierre Brulé, whose job has been vacant since he was dismissed last summer by CII-HB's majority shareholder Saint Gobain Pont-a-Mousson, a glass-and-fibres conglomerate which has a 40 per cent stake in Olivetti.

Ironically, 48-year-old Théry was fired from his post as director-general of French Telecom soon after the Socialist government took over because he was regarded as a supporter of defeated ex-President

Valéry Giscard d'Estaing. Giscard appointed him to his telecom post in 1974. Théry earned an excellent reputation as the man who pushed through an ambitious programme to double the number of telephone lines in France.

The new government criticised Théry for upsetting public opinion by thrusting a pilot electronic telephone directory viewdata scheme in Brittany, an area chosen for a test run which has been resented by many local users. But now he is regarded as a top-rate manager whose talents must be used.

Théry was in America last month brushing up his English - and making contacts with the electronics and computer industry there.

Publishing service goes into production

by Donald Kennett
THE first productive work is now being done on the experimental Blend service based at Birmingham University, which is intended to enable electronic media to be evaluated for use in the publication of scientific research papers, which must be refereed.

Sixteen papers have been put into the system by the community of 60 researchers at 25 sites involved in the experiment. They will now be refereed using procedures similar to those used with papers submitted to conventional scientific journals, but the referees will be able to communicate with each other or with authors via Blend (Birmingham and Loughborough Electronic Network Development).

Conventional journals of research papers typically take 18 months to complete the publishing cycle, with refereeing and selection taking five months and preparation for printing a further seven. Blend aims to streamline the whole process by investigating alternative methods over the next two years.

Work on the project began last January, funded by a £256,000 grant from the British Library Research and Development Department, with the installation of the Notepad teleconferencing software from California-based Infomedio on a Digital Equipment DEC-20 at Birmingham University.

Extensive modification was then carried out to the electronic publishing section of the package.

IBM also rebutted a recent report in The Times suggesting that it had deliberately not produced an unbreakable encryption algorithm for DES under pressure from the US National Security Agency.

A spokesman for IBM said: "In 1978, a US Senate select subcommittee on intelligence publicly issued a summary of a classified study stating that the NSA did not tamper with the design of IBM's algorithm in any way."

"IBM believes that the DES algorithm is adequate for all commercial purposes for which it is intended. To the best of our knowledge, no one has discovered any mathematical weakness in the DES algorithm."

He added: "Nor has anyone demonstrated any technically or economically feasible means to discover a DES key by exhaustion, that is by trying all possible key combinations."

Thomson-CSF hires 2,000 young engineers

by Jack Gee
FRANCE'S Thomson-CSF, which is scheduled for nationalisation, is hiring 2,000 young engineers and technicians early this year to cope with orders for computer and electronic equipment.

Chairman Jean-Pierre Bouysse said: "Orders might not follow right away. But since it takes time to train these youngsters we have to be ready for when a new boom occurs."

"Computer and electronic technology is developing so fast that we cannot afford to waste time. We shall also be competing on the labour market with other companies."

"I expect 1982 will be a year to pause for our company after the stable period in 1981 and the amazing rate of growth during the three previous years. But the effects of new orders will make themselves felt in 1983."

Many of the newly recruited engineers will be needed to fulfil a £180 million order for computerised control equipment which the Soviet Union has placed with Thomson-CSF for the 3,000-mile Siberia-Europe pipeline.

The French government has now given the go-ahead to Thomson-CSF after ordering it to postpone final agreement with the Russians in October.

Insurance private network

by Donald Kennett
ONE of the UK's largest private telecommunications networks has been brought into operation by the Commercial Union Assurance group.

By the end of 1982, the network is to have 26 British Telecom and IBM leased circuits controlled by PARKS, the group's automatic branch exchange. There will be a total of

most 60 area offices and 100 smaller sites in the UK.

The first exchange in the network, an IBM 3750 at head office in London, was installed in 1980. It was followed by six of the similar 1750 version during last year in sites including Manchester, Glasgow and Bristol and a seventh is to be installed in Cardiff in the near future.

MicroFinesse US boost

THE financial modelling tool MicroFinesse is about to join the host of products out to win the rapidly growing US market for such applications on microcomputers. US publisher Osborne McGraw-Hill has chosen the product to spearhead its push into software distribution and has signed an agreement with the P-E Consulting Group, which is already supplying the product through Apple dealers in the UK.

Osborne McGraw-Hill is already involved with the Osborne microcomputer, which looks set to take a large slice of the micro market.

No salary secrets or job title mystique in this coms house

by Philip Hunter

WIELGOSZ... Silly to keep salaries secret.

Most companies keep salary details confidential and nearly all give their staff a job title. Neither by small software house Syntek, which is also unusual in specialising in technical work, usually the domain of larger companies and the universities.

House in three fourth-floor rooms of a central London conversion, Syntek deals almost exclusively with communications work. There are ten technical staff, all from a scientific background, and one secretary.

Co-directors Peter Hornsby and John Wielgosz who founded the company in 1979 still count themselves as technical staff, spending half their time on professional work. "Although it is a year since I did any actual coding," admits Wielgosz.

What distinguishes the programming Syntek does from that of other small software houses, other than its technical emphasis? "The main difference is that

time is a factor," replies Wielgosz. "Data processing people don't have to be conscious of time," he continues, adding that this is because they deal with disc files, which are static objects.

"We have to deal with flows for communications lines, measuring time and dynamic input, where timing is vital," says Wielgosz.

The major claim for distinction in Syntek's company is its attitude to salaries. A high score for Syntek did much to confirm this. I always think that a hard test of a small company's success with personnel relations is embodied in its attitude to salaries. A high score for Syntek here, all salaries are published.

"It's silly to keep them secret," says Wielgosz. "If a company believes salaries are fair and correct or it doesn't. If it does, why not publish them?" He stops short of saying what a company should do if it believes its salaries are unfair.

"Our attitude to pay means that

we have to be particularly careful when we conduct our annual salary reviews," says Wielgosz. He presumes that salaries must be not only fair, but seem to be fair, surely an impossible feat in a large company which employs a systematic scaled pay structure.

About a quarter of Syntek's profits are shared out among its staff every six months, each bonus usually adds about ten to 15 per cent to annual income," says Wielgosz.

Syntek is not immune from the cold of the recession, however, and recently there was one period without a profit. There is no corresponding loss sharing scheme — instead, there was an abortive working week, staff being offered extra holiday at short notice.

Such attempts to halt the insidious advance of spare time are regarded as draconian by employees everywhere and even small friendly Syntek is an exception —

the move was rejected.

Wielgosz loves an argument and encourages his team to answer back when they disagree with him over matters technical or personal. Team member Andrew Watt confirms this, while making the observation that there has to be someone to make the final decision, or else programs never get written.

There are no formal job titles at Syntek, other than for the two directors. "If a client wants titles, I guess he can have them," says Wielgosz. "Titles are just a short way of describing experience," he adds, explaining that he will call someone a software engineer if he thinks it will help a client to understand what this person has done to computing.

In common with other small software houses, rules are often reversed, with someone who has just sat it out on the coding bench putting his mind to system design.

How does Syntek recruit its staff?

"We always hold two separate

independent interviews," replies Wielgosz. "Only if both yield the same verdict will the candidate be successful."

Syntek asks to see two things: copies of the candidate's work and examples of documentation. This stands to reason, Wielgosz argues, because these will after all be the two main products.

"We pose technical questions," Wielgosz continues, "because we like to see someone's mind at work. Sounds arrogant, but it's true. Also we are looking for talent, not experience. I've seen plenty of experience which can mean the person concerned has

been cooking things up longer than others."

Syntek's stress on honesty can cause problems with some clients, Wielgosz claims. "One or two clients have been taken aback when some of our younger staff have been forthright," he says.

Staff, he goes on, are instructed never to conceal the truth, a policy by no means universally popular. "Sometimes clients don't want to be told the truth," he claims.

In the case of corporate clients, contracts often go to people who say what they would like to hear, with inevitable overbudgets and a big row."

It would be nice to have a few examples of such contracts, but that would be like asking Wielgosz to go on a hunger strike.

One of Syntek's team, Stephen Lowe-Watson, is a zoology graduate who became disillusioned with his subject while doing a postgraduate course at Sussex and then turned to computing.

He explains that the problem of calculating crisis times of programs is a matter of summing the length of instructions and timing accordingly. Could this not be computerised? I wonder.

Maybe, but probably not worth it, is the pragmatic reply. An answer which strengthens my growing awareness that the last thing programmers want to computerise is their own work.

Throughout our discussion, Wielgosz stressed what he considers unusual about his company. His attitude is summed up by his words: "We do here what others merely read about in Computer Weekly."

WATT... Programming is living with failure until system is finally debugged.

The Exhibition Which Works For You

MICROSYSTEMS '82

WEST CENTRE HOTEL,
LONDON
FEBRUARY 24-26, 1982

Over 6300 quality visitors attended the 1981 show — providing the correct balance of users and specifiers of your products and services. The formula is right — you can make MICROSYSTEMS '82 work for you by reserving your stand space NOW.

Find out how exhibiting at MICROSYSTEMS '82 can work for you by completing and returning the coupon now to:
Exhibition Manager, MICROSYSTEMS '82, IPC Exhibitions Ltd., Surrey House, 1, Throley Way, Sutton, Surrey SM1 4GG.

Error-free program is only a dream

AN interesting analogy is drawn between computer programs and scientific theories in a pamphlet written by Dr Boris Allan of Manchester Polytechnic.

If a scientific theory has not been disproved, it has only been shown to be correct so far and may later be discredited. Newton's theory of gravitation held water logically at the time and was only shown to be incorrect by later testing.

The same is true of computer programs, he argues. To show that a program is logically correct does not suffice. Non-logical errors may occur, for example corrupt data might be supplied.

The so-called "correctness proof" suffer from this flaw, Allan argues, by concentrating on logic errors and ignoring two main classes of program error: computation errors such as overflows, and incorrect input of programs or data.

Computing is a real-world, not a dream, Allan reminds us.

The core of Allan's argument is embodied in the Chinese proverb: he quotes on the inside cover page of the pamphlet: "To believe in one's dreams is to spend all one's

life asleep. The perfect language and the error-free program are dreams, he maintains. Certainly a thought to begin the new year with.

PUZZLER

IN this week's problem you are asked to create a very short "game" of chess, with only four moves played by each side, to bring about the diagrammed position.

BLACK

WHITE

White's King-side Knight is absent, and so is Black's. The only other change from the conventional start position of a game is the absence of Black's Queen's Pawn.

See page 39 for solution.

OP SPOT

MILLER... "Dexterity tests have been the graveyard of many hopes."

Prove you deserve your job — do an aptitude test!

HOW did you get your first job in data processing? Unless your uncle happened to be the DP manager, you probably had to go through the time-honoured procedure of replying to an advertisement, being offered an interview, buying a suit or new dress (depending on your proclivity), and impressing the interviewer sufficiently to be offered a job.

But those of you who have interviewed anyone will know that, nerve-racking though being interviewed is, actually doing the questioning is far more difficult and worrying. If you are applying for a job, the worst that can happen is your failure to be offered it — only you lose.

If, on the other hand, you give a job to a candidate who then singularly fails to perform adequately, you are failing the candidate, the company, and worst of all, your credibility within it.

For over two years there has been available an aptitude test for prospective programmers and analysts. This test and its variants have been used by both ICL and IBM to appraise would-be systems staff.

Although a similar test for operators has been available in the US since 1973, it has only recently been anglicised to permit its use in Britain.

The organisation responsible for both the programmer and operator tests is the Independent Assessment and Research Centre, just off Marylebone Road in London, where I talked to the director, Dr Ken Miller.

Formed in 1968, the IARC is a non-profit making organisation, with educational charity status, and its main objective is enabling industry and commerce to make the best use of manpower.

In addition to tests for technical aptitude, the centre offers tests for mental alertness, temperament, interpersonal skills, personal values, and leadership and management potential.

But back to the Computer Operator Aptitude Battery. What better way to find out about the test than to get an operator to try it? What better operator than my good self?

And so it was that, ten years after my interview for the post of trainee operator, I sat down to be tested to see if I was suitable material.

I was given a booklet containing three tests. The first was sequence recognition and I was asked to visualise the order in which to place a scrambled set of time-related events.

For example, buying a round of drinks:

1. Try for drinks
2. Ask people what they want to drink
3. Carry drinks to table
4. Notice glasses are empty
5. Check if you have enough money
6. Go to bar and ask for drinks
7. Because there isn't a "make feeble excuse for not buying

drinks" choice, I would say the correct answer was 4, 5, 2, 6, 1, 3. There are 24 of these to complete in the ten minutes allowed.

The second part checked my ability to perceive whether arrangements of numbers and letters conform to specified formats. Only 48 of these to do in five minutes.

The final part of my ordeal was the logical thinking test. Here I was presented with five flowcharts and by working through them, say what various boxes represented.

I hadn't done an examination or test since I took my driving test many years ago, and the nerves came back with a vengeance.

You will no doubt be pleased (and not a little surprised) to learn that I am better than 95% of trainee operators and better than 85% of experienced ones. I knew it all along.

I asked Dr Miller whether he thought dexterity tests were needed for operators. Although he

admitted that manual dexterity was relatively important for ops, he qualified this by saying: "Dexterity tests have been the graveyard of many hopes."

This test is long overdue and provides real assistance in recruiting the right staff.

Because the operator test is new a validation study is in the process of being carried out by IARC, and this is where you can help. Dr Miller needs DP departments to volunteer their operators for the test to obtain control information, and if you feel that your organisation could help, get in touch.

The complete test only takes 45 minutes and IARC would provide an examiner for your site if an experienced personnel officer was not available. All results would be available for examination.

You can contact Dr Miller at IARC, 57 Marylebone High Street, London W1M 3AE or on 01-486 6106.

Take your partners for the 3-phase alternating shuffle

COMPUTER WEEKLY, January 7, 1982

by Andrew Thomas

DISASTER

HAVE you ever considered the marvelous possibilities for chaos involved in the use of three-phase power supplies for computers? Neither had I, until the day the new alternator was installed.

The engineers had planned the changeover with great precision, and assured us that we would only be off the air for 30 minutes. We shut down the machines, and sure enough, after half an hour the instruction came to power up.

Everything went perfectly. All the indicator lights shone with renewed vigour, the disc drives spun, and the printers whirled.

I went over to one of the printers to put a new box of one part in. Having fitted the sprocket holes over the tractors, I pressed the run out button to line up at head-of-form, but the paper didn't move. Well, it did actually — backwards — a small heap of paper had formed on my feet.

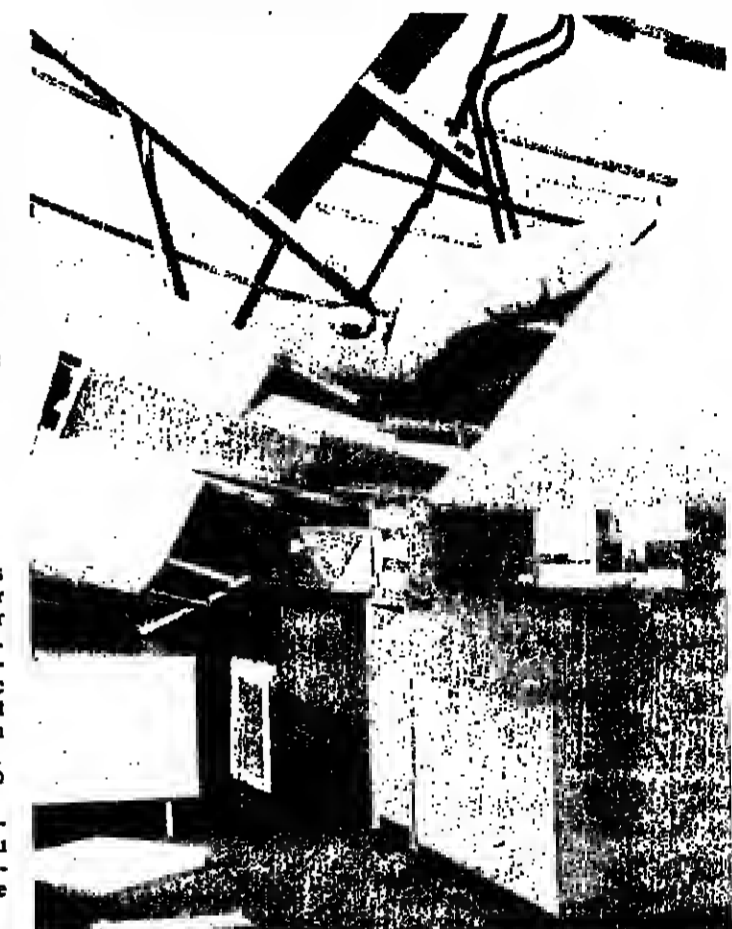

Sure enough, the tractors were

running backwards. So were the hydraulic pumps in the disc drives. Thirty six drives pumped oil out of the breathers.

"Oh dear," said the engineer in charge, "that was the gist of it, looks like we've got the phases

mixed up." And this of course was exactly what they'd done.

Most of you probably know what fun it is bleeding car brakes, so you can imagine the fun involved in getting the air locks out of three dozen disc drives' hydraulics. In addition, mega-lots of fines had blown in a selfless act of mass suicide to protect the hardware.

Someone must have gone through the roof over this one.

Want to see your name in print?

DO you know any horror stories that deserve to reach a wider audience? If so, write to me or phone on 01-661 3500 ext 3422.

You don't have to submit completed articles, just give me the details and I'll do the rest. What better way of seeing your name in print?

Anonymity will be available on request.

All contributions will be gratefully received. Remember, if you can laugh at someone else's mistakes you aren't likely to make them yourself.

Unless you're a very silly person indeed.

There's only one

systems

and only a restricted range of readers is qualified to receive copies. However, if you are a systems designer, electronics engineer, technical director, scientific officer or computer manager you could be entitled to receive Systems International free of charge.

What you'll get is Europe's foremost technical computer magazine packed with in-depth articles, product reviews and equipment surveys — essential information, much of it unobtainable elsewhere.

If you are responsible for specifying, developing and implementing computer-based systems you should be reading Systems International.

Make sure you have access to this important source of information. Just complete and return the coupon.

To: Chris Hipwell, Room 309H, Quadrant House, The Quadrant, Sutton, Surrey SM2 6PU

I wish to receive Systems International free of charge.

Please send me a reader application card.

PEOPLE

IBM names head of new operation

IBM UK has merged its Data Processing, General Systems and Office Products divisions into one, and has named Fred Clarke to head the new operation in his new capacity as general manager, marketing and services, IBM UK.

The merger, according to chairman and chief executive Edwin Nixon, reflects changes in the marketplace during the last six years since the formation of the General Business Group, which included the general systems and office products divisions.

Clarke joined IBM in 1957 after three years in the RAF and a spell as head of the maths department of a grammar school in Bishop Auckland.

IEETE award winner

A THIRD engineer (Contracting) with the Eastern Electricity Board has won the IEETE's Girl Technician of the Year Award, co-sponsored by the Caroline Haslett memorial trust. She is Patricia Haynes, 24, who received a prize of £250 and an inscribed rose bowl. Runner-up was Linda Gardner, a higher scientific officer with the Ministry of Defence in Malvern.

Haynes joined the EEB eight years ago as a student apprentice engineer (commercial). During this time she took a day-release course for the Ordinary National Certificate (Electrical Engineering), which she gained with four distinctions.

This was followed with a block-release course at North East London Polytechnic where she gained a Higher National Diploma in electrical and electronic engineering.

New offices for GMSL

GMSL has opened new offices in Hove, Sussex, to house staff based in the Southern region. The company has developed in a few years from the systems department of a large mainframe computer bureau serving the needs of the Grand Metropolitan Group, to become a systems and software house serving industry generally. Cambridge House, the new premises, is in Davigor Road, Hove.

It's easy to complain about advertisements.

Every week, millions of advertisements appear in the press, on posters or in the cinema. Most of them comply with the rules contained in the British Code of Advertising Practice and are legal, decent, honest and truthful.

But if you find one that, in your opinion, is wrong in some way, please write to us at the address below. We'd like you to help us keep advertising up to standard.

The Advertising Standards Authority.

An advertisement is wrong, we're here to put it right.

ASA Ltd, Brook House, Torrington Place, London WC1E 7HN.

THESE pupils of Boston Spa Comprehensive have won £5,000 worth of Digico Prince microcomputer for their school, after being named Young Executives of the Year by Digico. Left to right: Paul Thushy, Alan Robb, Graham Steel (standing), and Nigel Skelton, whose team beat 32 others to first place. The competition was organised with Leeds Education Authority to promote an educational interest in computers and to demonstrate the complex factors involved in running a business. Runner-up was Morely Banteliffe High School, which received a £2,000 microcomputer donated by AIM.

Engineering councillors

GEC research director Derek Roberts and IBM (UK) Laboratories managing director John Fairclough are among the 17 members of the Engineering Council appointed last week by the Department of Industry.

The Engineering Council will take over many of the responsibilities of the Council of Engineering Institutions. Members, who are appointed for two years part-time, include employers, academics and union leaders, but must have professional engineering backgrounds.

Mike Pineott has been appointed sales manager of Minerva Computer Systems. He previously spent nine years with ICL, and the past three years working for Data General.

Jan Jennings and David Prior have joined Prime as sales executives. Jennings, formerly with United Computing Services, joins the Feltham office and Prior, previously with Sperry Univac, will be based at the company's Bedford office.

Douglas Jones has joined Bexley Council as assistant data processing manager. He was previously with Batic Computing Services for 10 years.

Ken Hawkins has been appointed sales and marketing director for Freight Computer Services. He has been with the company for nine years, responsible for its minicomputer activities.

Alan Hatley has joined NCR as area manager for Scotland. He was formerly district manager specialising in the sales of NCR equipment to local government in Scotland. He has been with the company for 15 years.

John Barnes has been appointed sales executive at AM Jacquard Systems. He joins the company from NCR where he was an account manager.

Avia Clarke has joined Micro Scope as consultant to head support and customer liaison for the company's range of travel industry products. She was formerly a consultant with Dataskil.

Colin Stone has been promoted from regional manager to UK field manager at Storage Technology. Phil Stepley has been promoted from senior UK national specialist to UK technical support manager at the company.

Richard Smith and Jim Hewitt have joined Rediffusion Computers' Crawley office. Smith, formerly a manager with ICL, is systems verification manager. Hewitt, who is product promotions manager, has been with the company's Birmingham office as territory manager.

Ken Baker has joined Compeda as commercial manager, electronic division. He joins from Plessey Microsystems where he was marketing manager, memory products.

Jarman adds to board

AIMING to strengthen further its position in the microcomputer market is Jarman Systems, the Tring-based micro software specialist which has just added management consultant Harold Norcross to its board of directors.

Norcross is part-time business counsellor and director of several companies, following a career as a management consultant, during which he founded his own management consultancy, Norcross and Partners. This was bought by US company AT Kearney in 1969, and Norcross served on the Kearney board until 1975.

Norcross has been involved with Jarman since its formation three years ago, developing accounting software.

John Priestley has been appointed branch manager at Prime's public services branch. He joined the company in 1977 as Midlands area sales executive, later becoming manager of the Birmingham office. Peter Thomas has become manager of corporate accounts with the company. He was previously energy branch manager at Sperry Univac.

Bob Norfolk-Thompson has joined Wordplex as an account manager. He was previously a salesman with Cowper Type-writers.

Peter Buttle, who joined Memorex in 1975 as small systems sales manager, has been promoted to UK sales manager, communications, at the company.

Ken Brereton has joined Lundy-Farrington as a senior sales executive from De La Rue Systems, where he spent 19 years, serving most recently as export sales manager.

INBUCON'S mini- and microcomputer trainer Don Remenyi has travelled over 20,000 miles in ten days to present courses in Hong Kong, Singapore, London and New York. Remenyi has been spreading the word to managers and potential users of small business computers, and provided hands-on experience in operating and programming small business machines to 2,000 people worldwide last year.

DIARY

JANUARY 11
Visit to Charles Wells Ltd, Bedford. BCS Bedfordshire branch. Numbers limited, so apply to M. Adams on 04560 315515.
Privacy - joint BCS and IDPM meeting. IDPM Norfolk branch/BCS East Anglian branch, Castle Hotel, Norwich. 7.30.
JANUARY 12
Autobenklog. IDPM Scottish branch. Edinburgh University, Students Association, 60, The Pleasance. 7.30.
A view from DP staff in internal audit. BCS Auditing by computer group. Connaught Rooms, Queen Street, London. 4.30.
Ada Programming. BCS Bristol branch. St Vincent Rocks Hotel, Clifton. 7.15.
JANUARY 13
Micro to mainframe communications. BCS Edinburgh branch. Mountbatten-Building, Heriot Watt University, Grassmarket.
Edinburgh. 5.30.
Computing in your profession. BCS Humberdale branch. Grange Park Hotel, Wetherby. 7.30.
The presidential visit - Do we need a computer strategy? BCS Kingston branch. Kingston Polytechnic, Penrhyn Road, Kingston-upon-Thames, Surrey. 7.30.
Pascal, Quipro Data Systems. BCS Leicester branch. Lecture Theatre, James Watt Building, The Newark, Leicester. 7.00.
JANUARY 20
Meeting. IBM Computer Users' Association Management Group. Birmingham Metropole Hotel, National Exhibition Centre, Birmingham. Details from Mrs Speciale on 01-551 1643.
Meeting. IBM CUA Operators Problem Determination Workshop. Grand Hotel, Bristol. Details from Mrs Speciale on 01-551 1643.

CONFERENCES

FOUR speakers will present papers and lead discussion on the practicalities of project management at the Association of Project Managers' Project Management in Practice seminar, to be held at the Waldorf Hotel, London, on January 21. Speakers will emphasise how the gap between management systems and their application can be bridged. The fee, which includes VAT, is £34 for association members, and £42 for non-members. Further information from the Association of Project Managers, 13 The Chase, Penn, High Wycombe, Buckinghamshire HP10 8BB. Tel: (049) 481 2788.

Middle East's DP market on brink of boom

THE market for computer systems and services in the Middle East is on the brink of rapid expansion as government and local businesses snap up the benefits of information technology.

And with companies like ICL, Seicon, Systime and Racal-Milgo already having a strong presence, the UK is set to take a substantial share against fierce US competition and awakening interest from Japan.

Though oil companies have naturally led the way in introducing computers to the Middle East, the real growth is now occurring in public administration and utilities and, increasingly, among privately-owned trading companies.

ICL has £4.5 million in sales to the Middle East and Jim O'Neill, Middle East sales manager, predicts up to £9 million a year by the end of 1982. The regional sales manager for a major US company added: "We see revenue doubling every year."

"Most customers are in phase I of their development, with standard implementations in batch," he said. "But we get more and more users coming to us to see what their kit can do. Phase II will come shortly when the users get their computers. Then, the market will go. And it's absolutely right for small systems."

The potential of the market was revealed at a unique event just before Christmas in Dubai in the United Arab Emirates, the very Westernised trading centre at the neck of the Arabian Gulf.

The event was the first Gulf Computer Exhibition and Conference, backed by Computer Weekly and its new publication Middle East Computing. The exhibition attracted almost 50 stand holders from Europe and the US, with representatives from Canada, Japan and India thrown in, as well as locally-based companies. The conference was chaired by Computer Weekly Editor Simon Timm.

Visitors totalled 3,184 over the five days of the show from December 15-19, while the conference pulled in over 160 delegates over two days. Both events were held in the modern Dubai International Trade Centre, which organised the exhibition, and there was universal praise for the quality of visitors from exhibitors.

Local attendance from Dubai and the other Emirates, notably Abu Dhabi, the largest, formed the largest percentage of visitors, though the all-important Saudi Arabian market next door was heavily represented.

Exhibitors included most of the big names in the region, from IBM, NCR, ICL and Data General to Wang (via the local Emirates Computer Company), Systime, Seicon and Prestel.

Britain's National Computing Centre has teamed up with locally-based Datamatic Systems to sell its training packages and Filetab among other products, while other UK training companies like Keith London Associates and Automated Data Systems were also represented.

The main selling effort is from minicomputers up to large systems, reflecting the fact that many large organisations have standard applications which have still to be computerised.

Direct sales of computer equipment to the Middle East are not great. Figures from the British Overseas Trade Board for 1980 put Saudi Arabia's imports from the UK at just over £5 million, and from the US just under £7 million. The whole regional market is put at about £60 million for on-weapon DP systems.

But this figure can be multiplied several times for related services from facilities management, support, training, software maintenance and the like.

Sales of microcomputers are becoming a hot topic of the Tandys, Apples and Pats are being sold for home use, with some to people like financial directors purely to run Visicalc.

"Very few are for commercial use," Harrison added. He is predicting sales of between £1.5 and 2 million for Systime in the Gulf during 1982.

Oil companies ahead with some of the world's biggest sites

OIL companies naturally dominate the use of computers in the Middle East, and their influence was seen at both the Gulf Computer Exhibition and Gulf Computer Conference in Dubai.

Probably the biggest IBM and ICL installations outside their home countries are seen in the region. Saudi Arabia's giant Arabian American Oil Company (Aramco) which handles its oil exports in an IBM site, while the Abu Dhabi National Oil Company (Adnoc) in the United Arab Emirates has nine ICL processors.

Other IBM installations include the Bahrain Petroleum Company (Bapco) and Qatar's oil-producing organisation, while ICL has a large installation at the Kuwait Oil Company.

Applications developed at these sites are among the most sophisticated in the world. Former director of DP services for Adnoc, Ali Mosawi, told conference delegates that the company was on the road to developing well history techniques which will allow petroleum reservoir engineers to have a complete history of a well's characteristics and history to allow them to maximise oil production.

Techniques like these and reservoir mapping, as well as the control of a multitude of wells and pipelines, soak up processor power and demand huge add-on memory. Database management systems are widely employed.

The oil companies are also pressing ahead in non-oil systems. Carl Bistany, head of the Emirates Oil Company in Abu Dhabi which has the exclusive Wang agency for the United Arab Emirates, notes the advance in networking word processors.

Engineering and scientific applications are high on the oil companies' shopping list. Adnoc has just gone out to tender for a scientific computer centre, while ICL used the Gulf Computer Exhibition to launch its Perq into the Middle East.

The company's sales manager for the region, Jim O'Neill, reported "strong interest" and the demonstration package at the show ran virtually non-stop.

CORDER... "Training plan for the whole Gulf is on urgent requirement."

Training to keep out foreigners

TRAINING is an essential part of any systems supply to the Middle East, with Arab users the key target.

At least part of the reason is racial. The results of a recent census within the United Arab Emirates, so far unpublished, are thought to have revealed that Arabs make up as little as 15% of the population, while Europeans (mainly British) make up about a third. The balance is from India and Pakistan, and it is Asians who hold most of the middle and low-level jobs.

Making up the shortfall of Arabs for government ministries is an essential element of the drive to computerisation, as is the unspoken but important task of reducing the dependence of the general economy on immigrant, especially Asian, labour.

The UAE has an embryonic National Computing Centre set up with United Nations backing and modelled on the UK's NCC. There is also a Computer Training Centre in Kuwait.

ICL maintains a staff of 20 at the Abu Dhabi National Oil Company, mainly concerned with software development, but also involved with training, while IBM is on the point of opening a training centre in Dubai.

Inevitably the sharks of the training world have also latched on to the Middle East. Gavin Whitchello, training manager for Britain's Automated Data Systems, says that users are well advised to steer clear of companies using contract trainers. "No contractors," he says. "That's the way to lose your reputation."

Already established in the area is Keith London Associates, and managing director Colin Corder gives regular courses in the Dubai International Trade Centre.

In an address to the Gulf Computer Conference, Corder warned: "There is a shortage of skilled computer staff... and an almost total lack of knowledge among computer users as to both the potential and the problems of computers. In both these areas the position will worsen in the immediate future."

Citing the adverse effects of expensive expatriate staff with little loyalty to any organisation and frequent job moves, he said that a training plan for the whole Gulf, within a country or within any organisation is so urgent a requirement.

Software the key to systems sales

EVEN more than markets elsewhere, sales of computer systems in the Middle East are software-driven.

A local executive from IBM, who admitted the company is not pushing sales much below the System 34, said: "I think I can say that no customer - or perhaps one university - has taken a 34 without proprietary software. I don't think the 'make' business is here. They'll not buy and develop for themselves."

Even in established sectors like banking, where IBM runs neck and neck with NCR for market leadership, the software houses make all the running, he added.

"We can sit back happily and let John Hoskyns sell a couple of 4341s. The customer comes back in a couple of years' time when he needs more capacity. It's wonderful business."

Third party vendors who are well established in the United Arab Emirates include Hoskyns and BIS in banking, and Datamatic Systems, Alpha Data Processing Systems and Alghamur Information Management Services (AIMS), which supplies Package Programs Ltd software, for general packages.

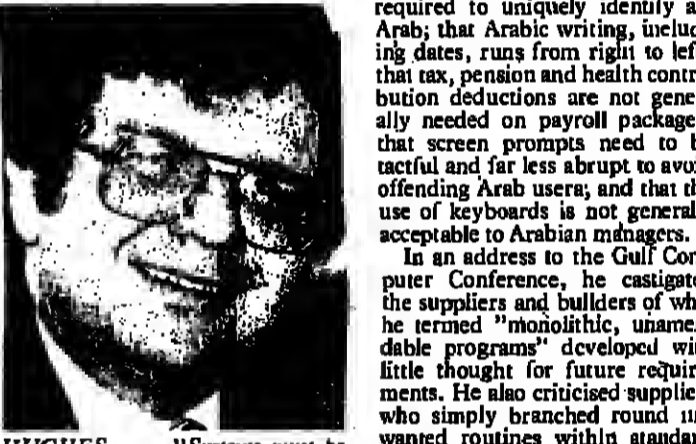

Opinion among vendors about the extent to which Arabic should be built into software differs, mainly depending on the market being tackled.

The Gulf general manager for Systime, Frank Harrison says: "Most enquiries we get are commercial, and not for Arabised systems. Of course we supply English/Arabic terminals and English/Arabic printers, but we find we sell to English and Asians in trading companies."

Kevin Hughes, international director for Computer Resources, disagrees. "Systems must be developed in Arabic from the start," he says, "not merely rewritten from a different language."

Computer Resources is in the middle of a £3 million contract to supply a 4341-based system for the General Presidency of Youth Welfare in Saudi Arabia. It is doing it by building a mirror-image system at an Arabic data centre in Woking and has hired Arabian programmers to work there.

Hughes cites a range of factors which demand Arabic be built in right from the start. They include the fact that up to five names are required to uniquely identify an Arab; that Arabic writing, including dates, runs from right to left; that tax, pension and health contribution deductions are not generally needed on payroll packages; that screen prompts need to be tactful and far less abrupt to avoid offending Arab users; and that the use of keyboards is not generally acceptable to Arabian managers.

HUGHES... "Systems must be developed in Arabic."

In an address to the Gulf Computer Conference, he castigated the suppliers and builders of what he termed "monolithic, unnameable programs" developed with little thought for future requirements. He also criticised suppliers who simply branched round unwanted routines within standard programs and called the result an Arabic package.

The comments reflect the fact that Systime is mainly established among commercial users, where English is the norm, while Computer Resources has made its mark in the government sector where the requirement for Arabic, especially in Saudi Arabia, is essential.

MVS Senior Systems Programmer**Circa £13,000**

The DP Department has recently installed a 12 megabyte Amdahl V7B with double accelerator to handle their expected workload increase over the next two years.

Wang equipment is used to provide word processing facilities and the Company is considering more extensive use of mini computers to support the powerful mainframe.

MVS/SP1.1

The machine is currently running MVS/SP1.1 at a high maintenance level and the Department is planning to install VM/SP in the middle of 1982.

APL will be introduced under TSO early in the New Year to provide a PERSONAL COMPUTING service for their users.

Other software includes CICS/VS, IMS, TSO, SPF and LIBRARIAN and the SYSTEMS PROGRAMMER will be responsible for evaluating possible additional software packages as well as tuning the existing system.

120 on-line terminals going to 200+

The users are heavily dependent on real-time systems and they are keen to increase the number of terminals to well over two hundred during the next 2-3 years. On-line processing has played an important part in our Client's success and the DP Department is continually seeking ways in which to improve the overall service.

The basic salary is further supplemented by an ANNUAL BONUS, free restaurant, free life assurance and a free private health scheme.

This senior position will cover all aspects of systems programming with a specific responsibility for the MVS software. VM experience would be an asset but is not a requirement.

The City

Our Client is one of the UK's largest insurance and financial organisations dealing in more than 150 different currencies. The modern offices are situated in the heart of London and should prove no problem for people travelling in from London and the Home Counties.

Please apply to our London office for further information quoting Reference S1/0701.

Myriad Appointments Limited

Recruitment Consultant

Does the idea of running a business within a business appeal? If so, read on...

We are a busy search and selection consultancy within the £75M Charles Barker Group of communications and consultancy companies. We are now seeking an additional Consultant to take responsibility for our Computer and Electronics recruitment activity — already well-established but ripe for considerable expansion.

The "man specification" and rewards package (which will include a car) are both flexible — but will, of course, be mutually compatible. Nevertheless, it probably goes without saying that technical/market knowledge, commercial flair and self-motivation are essential; previous experience in this field of recruitment would be a bonus.

If you are interested, telephone or write to Charles Walker at the address below:

BERKSHIRE/WEST LONDON**2+ YEARS' IBM EXPERIENCE?****SYSTEMS PROGRAMMERS
SENIOR PROGRAMMERS
ANALYST PROGRAMMERS****£9,000-£13,000 + CAR**

We are retained by one of the world's largest independent suppliers of packaged application software to recruit IBM experienced computer professionals for their technical support group. Work will involve pre and post sales support on technical aspects of the company's range of financial packages. This will include system installation and demonstration on clients' machines, together with development of systems to cater for the needs of this expanding market.

IBM COBOL programming experience is essential and for some positions, experience of CICS, DL/I or IMS would be an advantage.

Apart from the right technical background, we are looking for professionals who enjoy client and prospect contact and excel in this area. Mobility is required and a driving licence is essential. For those who enjoy overseas travel, opportunities exist to work on short term assignments in the U.S.A. and the Middle East.

These are challenging and exceptional career opportunities for high calibre and ambitious computer professionals who will be rewarded with a high salary, company car, BUPA, annual bonus and excellent pension scheme.

For further information, please contact MARK IRENS quoting reference CW 0701/1

ENGINEER****DISK TECHNOLOGY****LONDON BASED - NATIONAL
TERRITORY****BASIC £10,000 p.a. QUOTA £25,000+
COMPANY CAR ETC.**

Our Clients are poised to take the OEM/Distributor market place by storm with their range of disk drives and printers. Already Europe's largest supplier of computer systems, they are ideally placed to capitalise on this new operation and have already an impressive order book.

They need another Sales Executive to join their successful team. The rewards will be excellent for the right person who should have:

- ★ A strong technical/engineering background in current disk technology.
- ★ A sound understanding of the OEM/Distributor market place in U.K.
- ★ A successful record in sales or support with the ability to move into sales.

Please telephone BOB BOWER - Advising Director for details.
Ref. CW 0701/4

Hutton**Timesharing Systems Development
DEC-BASIC****City of London****c £11,000**

In the highly-competitive world of timesharing bureaux, our clients have proved remarkably successful - a publicly quoted company with sound financial resource, they have achieved a formidable 5-year growth record, averaging in excess of 200% per annum. In doing so, they have earned an outstanding reputation for providing first-rate timesharing services on a sophisticated range

of DEC hardware, to be augmented by additional VAX machines early in 1982.

In line with such expansion, they now wish to appoint two experienced computer professionals to senior positions within the company, as follows:

**TWO
PROJECT
LEADERS**

You will play a leading role in the design, development, implementation and maintenance of highly sophisticated packaged applications, from analysis of users' business requirements through to assessing, controlling and assisting the programming effort in implementing the appropriate solution. Ideally in your mid/late-twenties, you will have gained at least 3 years' experience in the design and development of systems in BASIC for DEC equipment. In addition to proven skills in both analysis and programming, you should have a sound technical appreciation of on-line/database-orientated applications; in-depth knowledge of RSTS, VMS or RSX is essential. Above all you will display strong personal qualities and management potential, and the ability to liaise with clients at senior level.

Candidates for both positions should possess sound academic qualifications and a high degree of innovation and self motivation. Career prospects are excellent within a company noted for salary reviews and advancement strictly on merit and for young, flexible management.

To discuss these opportunities in more detail, and in strictest confidence, contact Barry Latchford on the number below, or on Newick (STD 062572) 3197 after 7.00 p.m. Alternatively, write to us as advising consultants quoting ref. 286/7.

Barry Latchford Associates

Blair House, 7 Hazelgrove Road, Haywards Heath, West Sussex RH16 3PH

Tel: (0444)

59815/6/7

**IBM COBOL
PROGRAMMERS**

YOUR career can really "Take-off" in 1982. Our client, already recognised internationally as market leaders in their own dynamic environment, are URGENTLY seeking to fill EIGHT new programming positions created by exciting new European expansion.

An impressive variety of hardware awaits you, including IBM 4341/2, Honeywell, System & Prime. Professionalism is the keynote of our client's management. Opportunity for progression is available to ALL staff.

THE REQUIREMENT

A MINIMUM of ONE year's programming on IBM with knowledge of DOS, CMS, or VS1 is ideal, but consideration will be given to other experience.

THE LOCATION

West London, ideally situated for Central Line & Car travel.

THE REWARDS

Salaries between £8K-£10K
Work in Italy in 1982, should you wish.
Stability & Stimulation.

LUTON (0582) 454235 " "

WATFORD (0923) 29956. Any other time.

COMPUTALINK Ltd
International Recruitment Consultants

We are expanding and require additional programming staff:

Wyeth Laboratories is a major international pharmaceutical company with a sound record of sustained growth and development in the fields of medicine. In keeping with a company in the forefront of the industry a major expansion is taking place in Data Processing and an IBM 4300 series computer has just been commissioned. A new office extension including a computer suite is under construction. Wang and IBM word processors are already in use and an electronic PABX will be installed in the near future.

To progress further we intend to develop new techniques based on CICS and TOTAL and wish to appoint the following additional experienced personnel.

Team Leader-

Application Programming (Reference EDP/1)

A Programmer with several years' experience of BAL and PL/I is required to lead a team in commercial applications work. Candidates should also have some knowledge of the above TP monitor and database. The ability to lead and direct project groups is essential.

Analyst Programmer (Reference EDP/4)

We plan to develop computerised designs to analyse scientific data from clinical trials and in order to do this we are looking for an Analyst Programmer with knowledge of PL/I to provide expertise in the use and capabilities of SAS.

Initially the person appointed will work closely with our medical statisticians and clinical research officers and may eventually be involved in the extension of SAS facilities to our commercial activities.

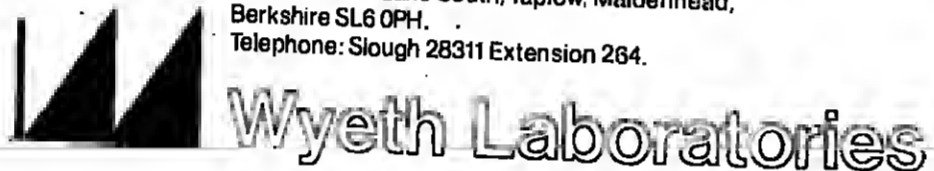

Programmer (Reference EDP/5)

A PL/I Programmer is required to provide programming support for the new clinical research applications team.

Candidates must have a sound knowledge of PL/I and CICS. Some previous experience of statistical applications would be useful.

If you are interested in any of these vacancies please apply to:

Mrs. J. Andrews, Personnel Officer, Wyeth Laboratories,
Huntcombe Lane South, Taplow, Maidenhead,
Berkshire SL6 0PH.
Telephone: Slough 28311 Extension 264.

(793)

ICL PROGRAMMERS AND ANALYSTS

Up to £10k and £12k

If you have or want on-line experience come on board Britain's most progressive ferry company. Townsend Thoresen, part of the European Ferries Group, has been voted Britain's top ferry company for the third year running. This success has led to a major expansion of the company's computer activities, based upon a large ICL 2900 series installation in Dover, with micros in several locations.

An integrated on-line reservation system is operating with terminals throughout the U.K., and in Amsterdam, Brussels, Düsseldorf and Paris. Furthermore, a major on-line system is being developed to include inter-active Viewdata and Prestel Getaway.

As a result we have these important vacancies in Dover for:

SENIOR ANALYST

To be responsible for the design of major on-line systems in an ICL environment. You must have appropriate experience and be able to work without supervision. Overseas travel is a distinct possibility.

ANALYST

You must have an ICL background and considerable experience in user liaison.

SENIOR PROGRAMMER

Five to ten years ICL Cobol experience is desirable with some exposure to on-line systems. You must be able to work without supervision and assist in the preparation of programme specifications.

PROGRAMMER

Minimum 18 months Cobol, ICL experience is required and if you have TABN and on-line experience, we'll be even more interested in you.

For all the above posts, knowledge of on-line reservation systems is particularly relevant, but we will be pleased to see applicants with good technical backgrounds, wishing to further their careers in this important area.

This is an excellent opportunity for self-motivated professionals to join a small, dynamic team, working within one of Britain's most progressive companies, on exciting new projects.

Salaries are negotiable and conditions of employment, which include concessional travel and relocation expenses where appropriate, will all prove very competitive.

Write or telephone 0304 204040 now for an application form to: Derek Weaver, Senior Personnel Officer, Townsend Thoresen, 1, Camden Crescent, Dover, Kent, CT16 1LD.

TOWNSEND THORESEN

A New Deal..

Are you looking for a better contract assignment, closer to home, on more interesting work? Wouldn't you rather be exercising all your skills, and commanding appropriately higher rates? You'll get a New Deal from us in 1982. A better deal.

We've over 50 urgent client requirements and need business analysts, systems analysts, technical analysts, designers, consultants, analyst/programmers, application programmers, systems programmers and technical support staff.

We'll discuss assignments thoroughly with you, we'll pay you weekly, we'll give you the security of our legendary People Package which includes new benefits for 1982.

..from a new team..

We've a new management team here at Computer People North. Chris Lancashire, who built up our company over the past 5 years is now helping to get us established in California, heading up our new Los Angeles office. In his place we have the dynamic team who have been instrumental in trebling the turnover of Computer People Midlands: Lee Walkinshaw and Derek Batchelor. A new team with a new style.

In addition to consolidating our presence in virtually all major contract staff users in the north, we are rapidly introducing many new clients to the concept of contracts resourcing.

We're a member of the VLI group - the biggest in the business. But we're only big because we do a better job for our clients and give a better deal to our contract staff. Come along to our offices on Thursday, 21st March and talk to us about a better deal for you in '82.

Walk in between 5 and 9pm. We'll welcome you with a glass of wine and give you the facts about quality assignments suited to you. If you are unable to attend, send the coupon below or telephone and ask for Debbie Bates, Bill Simpson, Roger Pond-Jones, or Derek Batchelor on 061-491 1666.

..in the North.

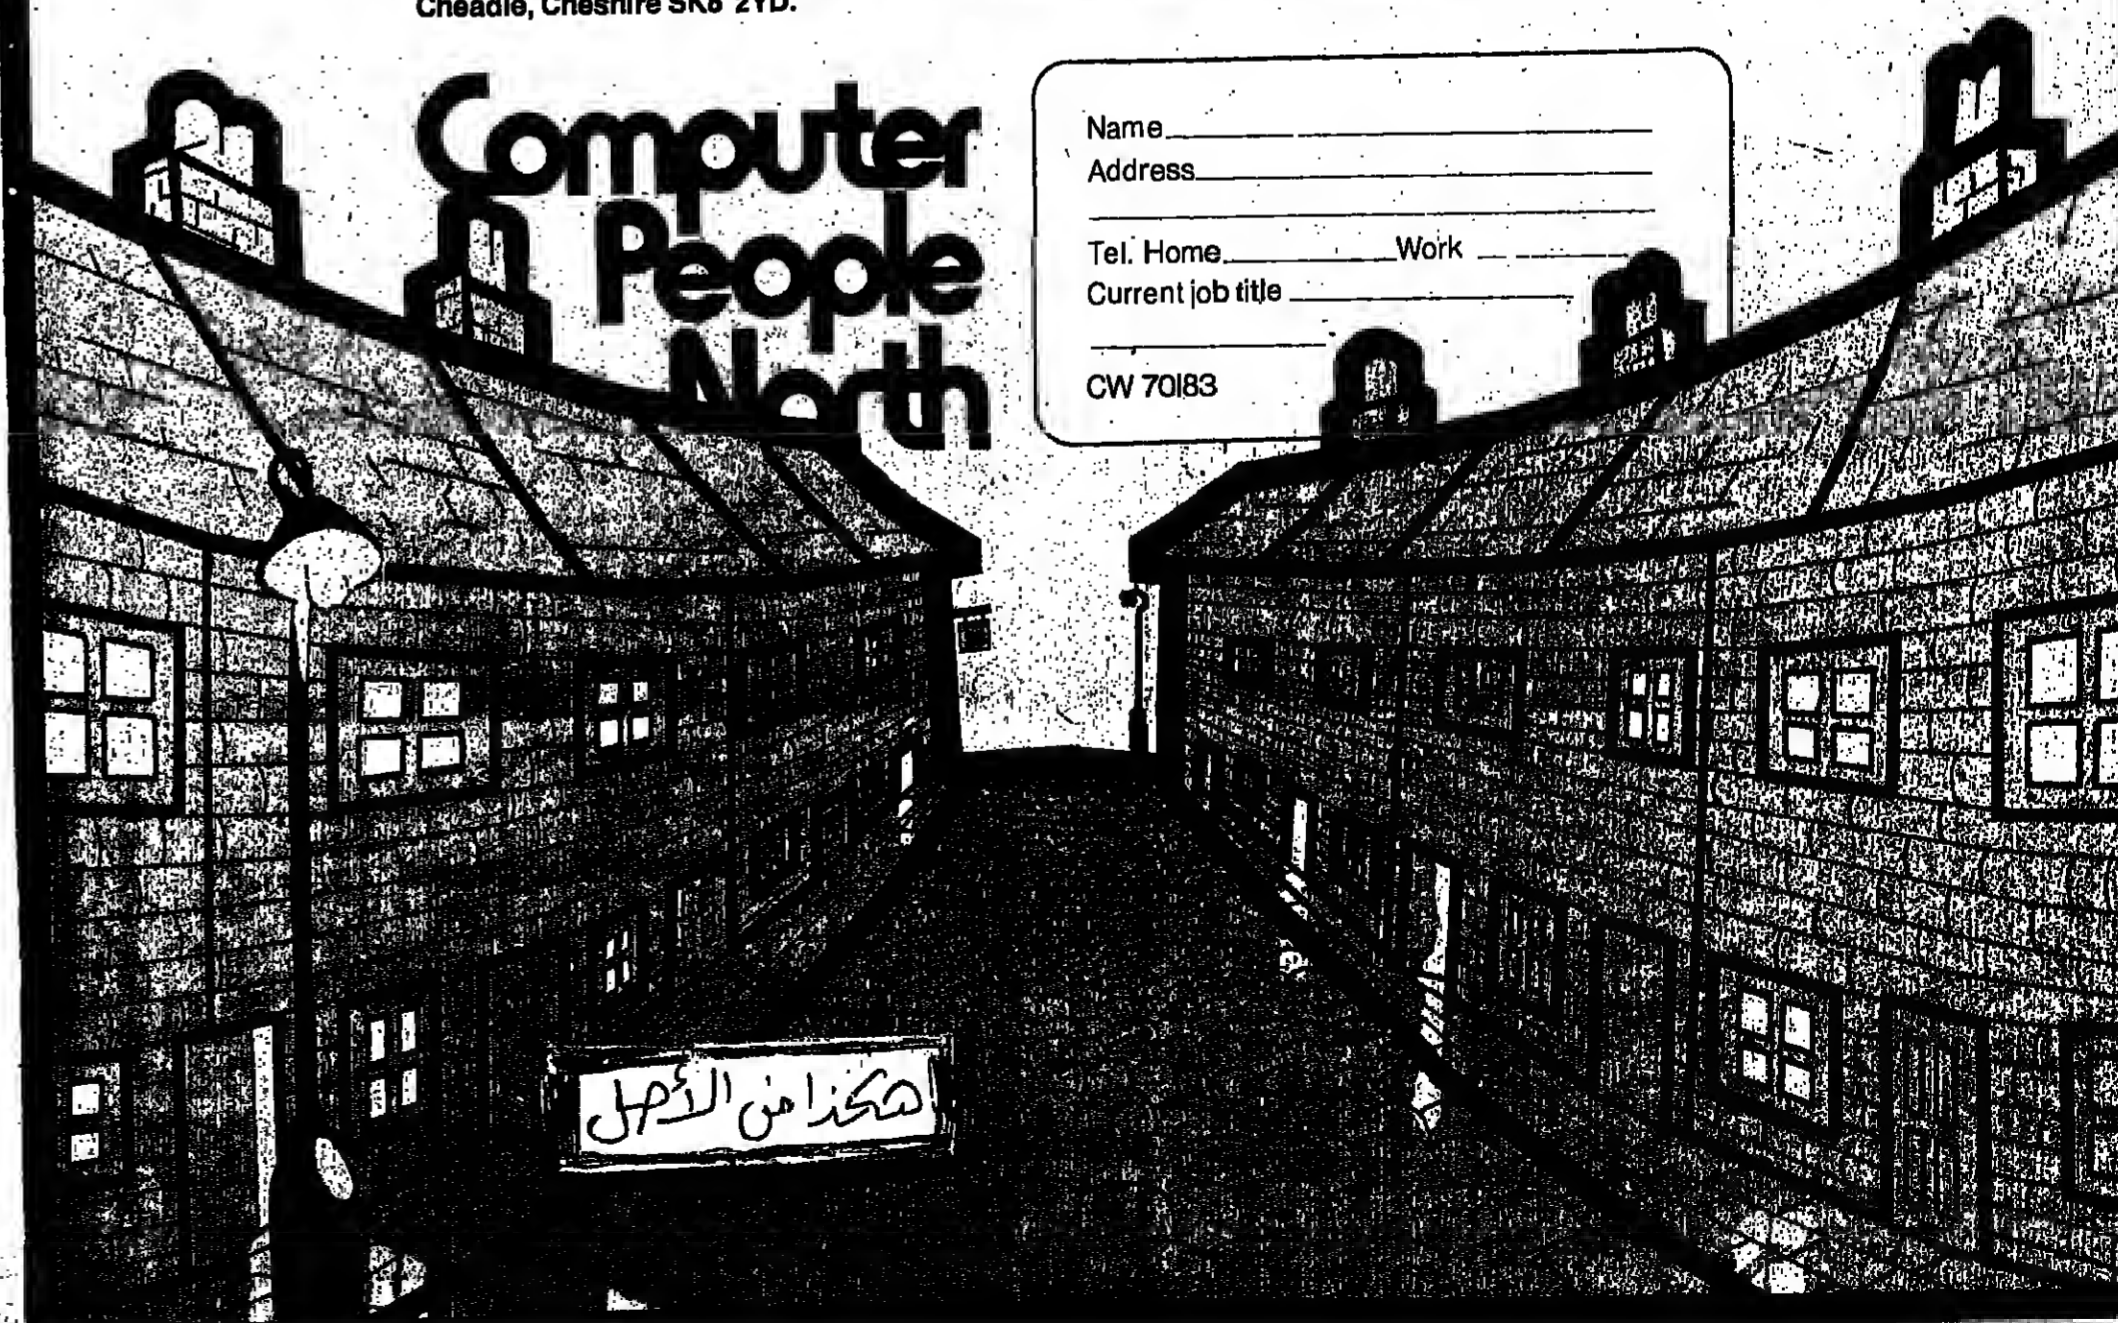

Mail this coupon (no stamp) to FREEPOST, Computer People North, Sovereign House, Stockport Rd. Cheadle, Cheshire SK8 2YD.

Saudi Arabia

ARABIAN DATA SYSTEMS (ADS) the leading Computer Services Company in Saudi Arabia is expanding one of its Facilities Management Centres to a multi-mode IBM 370/30XX MVS/JES 2 environment including MAS, NJE and MSNF. ADS offers an attractive remuneration package which allows for substantial financial accumulation, free housing, medical insurance, transportation, etc. The expansion has resulted in the following vacancies:

Systems Programmers

£18,000-£24,000 tax free + Benefits

To provide installation support on MVS/JES 2, MAS, NJE also planning installation and tuning. Applicants must have extensive software experience with at least two years working on one of the above products. To provide installation support on ACF/VTAM, ACF/NCP and MSNF. Minimum requirements are extensive MVS experience plus recent experience directly related to the above products.

Performance Measurement/Capacity Planning Consultant

£18,000-£24,000 tax free + Benefits

To provide performance measurement and capacity planning in an MVS/JES 2 environment. Applicants must have extensive systems programming experience and have worked in a measurement and tuning capacity.

Data Services Manager

I/O Production Control
£19,000 tax free + Benefits

Responsible for the building-up and management of a substantial and diverse Data Entry service and related user interface sections with local and remote units (expected staff establishment 200). Applicants must have had supervisory experience of more than one data entry system, a sound background in IBM operations at least shift leader level, and OS/VS1 or MVS exposure.

Programmer/Analysts

£15,000-£20,000 tax free + Benefits

To work within financial management, administration and database development teams. Applicants must have extensive IBM OS/VS1 or MVS programming experience and have worked in a development environment using COBOL, PL1 or Assembler.

For further information, telephone Jenny Dalrymple-Hay or Ian Murray-West on 01-493 2547 (day) or respectively Beaconsfield (04948) 4879, Milton Keynes (0508) 562415 (evenings/weekends), or write quoting ref. 8888.

DALRYMPLE & MURRAY LTD, 1 HALF MOON STREET, LONDON W1

ANALYST PROGS.

BASIC
c.£8,000 P.A.

This small software house, based in London, requires a BASIC programmer with two years' plus experience, to join them as an Analyst Programmer working on Business Systems. This is an excellent opportunity for a young person to gain good systems knowledge, whilst working on development projects for small businesses.

ANALYST PROGS.

COBOL DOS/VSE
LONDON
c£12,000 P.A.

We have an unusual situation here where a major group has recently formed a new computer bureau/software house to service its group requirements as well as external companies' needs. Based on the East London/Essex borders, the Company requires an additional person, aged 25-30, to join them with responsibilities for Design/Programming on major development projects. The experience we require is four/five years' programming in COBOL plus design/analysis experience with DL1 and CICS. Also it should be mentioned that whilst it is not intended to appoint managers at present, opportunities do exist for team leading type responsibilities, and certainly real promotional chances for the future. Lastly, the Company has bought IBM 4300 equipment, and all the systems being developed will be On-Line/Real Time. Also being part of an international group, opportunities exist for overseas travel, especially Germany.

Senior Executives
London/Southern Region
c£14,000 Guaranteed

Company car **On Target c£16,000+**

For more than 10 years we have provided the ultimate resource in computer services.

TERRITORIES:
Include WI and City areas.

Established for more than 10 years, we are now one of the leading and most successful International Computer Services Organisations. Since our inception we have achieved consistent growth, exceeding all projections. 1982 will be no different; as part of a major European expansion we have decided to expand our highly successful sales team in the United Kingdom.

We provide and offer the ultimate resource by way of a broad range of services, recognised as industry leaders. With yet more new products to be introduced in 1982, we believe that we will not only have achieved leader status, but a level of excellence second to none.

We are seeking the following:-

- **Highly successful sales executives** from the computer services or software environment, with proven track record. Desirable experience would be in the areas of finance or financial modelling.
- **Of particular interest** are the highly lucrative territories available which are expected to yield in 1982 an extremely high income for those who are successful.

Prerequisite requirements are a good level of education, age 25/35 and resident within the London or Southern Region.

In return, we offer a remuneration package comprising a high base salary, commission and initial negotiable guarantee yielding first year earnings of not less than circa £14,000, where on target earnings would be c£16,000. A company car, full BUPA and a comprehensive training both in the UK and USA are also included, together with other very attractive incentives. For the ambitious and subsequently successful, we offer outstanding career opportunities.

For further information and immediate confidential interview, contact Chris Fry on 01 935 0671 (24 hour answering service) or 05827 2354 evenings and weekends or Paul Pearce on 021 236 3781 or 021 308 4908 evenings and weekends.

Amsterdam 010 3120-780947 Willemsparkweg 92, 1071 H.M. Amsterdam.

PROGRAMMERS

to £11,500

HP COBOL

Senior and junior programmers are required by sites in C. London and the Home Counties. Applicants should have from 1 to 4 years' experience preferably gained in an H.P. environment. These positions are with progressive companies offering excellent career prospects and a variety of perks including mortgage subsidy, travel allowances, etc.

PROGRAMMER

c £9,000

ICL COBOL

Expanding City based installation seeks a programmer with around 2 years' Cobol experience gained on the ICL 2800 range. The preferred applicant will have both on-line and database experience with a good commercial background. The company is shortly installing new hardware and can offer excellent career prospects and perks including a substantial bonus scheme.

PROGRAMMER/ANALYST

c £9,500

HONEYWELL

Financial installation in C. London requires a programmer/analyst to complement their expanding development team working on new systems for their recently installed Honeywell 16 machines. Applicants should have around 3 years' programming experience together with some systems exposure. Knowledge of screenwrite would be advantageous. As well as a good career path the company offers an outstanding benefits package.

SYSTEMS PROGRAMMER

c £11,500

BURROUGHS ALGOL

A large company whose interests are well known are currently looking for an experienced systems programmer to join their specialist team on a wide variety of applications. A minimum of 3 years' experience utilising MCP end telecommunications with the emphasis on datacomms is required with extensive use of Algol. Any knowledge of cobol would be useful. A good relocation package is offered to this site in Surrey. This requirement is urgent.

PROGRAMMER

c £8,000

NCR COBOL

International financial organisation requires a programmer with NCR cobol and IMSQ experience. Any exposure to IBM RPG/II would be useful. This is an excellent opportunity to join a rapidly expanding D.P. department and become involved in a variety of systems and hardware with the possibility of some overseas travel. Usual banking perks are offered.

PROGRAMMER

£8,000

BASIC +

Bureau based in C. London is looking for a programmer with at least 18 months' Basic + gained in a DEC RSTSE background. Any accounting knowledge would be useful since the software package used is financial. This is an opportunity to join a small friendly but professional D.P. department.

SENIOR PROGRAMMER

c £9,500

HONEYWELL

Manufacturing company based in Middx. using a L64 DPS mainframe is currently seeking to recruit a programmer with 3 years' Cobol experience. Knowledge of TDS is desirable as the company is expanding and adopting all the latest software releases. Perks are excellent and include 5 weeks' holiday and 50% discount on company products.

OPERATIONS SUPER

c £8,000

HP 3000

A large company require an operations professional to look after their operations area. The successful applicant will have a proven track record and be able to demonstrate technical expertise and leadership qualities. Good knowledge of HP 3000 with extensive experience of modems, multiplexers and the OS software routines is essential. Assisted relocation where necessary.

SENIOR PROGRAMMER

£9,500

BASIC+/+2.

At least 2 years' Basic+ with some Basic+2 is required by a large City user. As well as programming ability applicants must be able to manage junior staff. All programming staff are encouraged to gain early involvement with analysts since there are no analyst/programmers.

PROGRAMMER

£7,500

BASIC/VAX

A merchant bank based in the City has a requirement for a young and enthusiastic programmer to complement their existing team. Ideally the client would want VAX experience having just taken delivery of a VAX1 but would consider DEC RSX knowledge. Standard banking benefits apply.

PROGRAMMERS

£8,500

IBM COBOL

A first time user has recently installed an IBM 4341 under DOS/VSE. At the moment they are using a software house but wish to pull away and recruit their own team. The requirement is at least 2 years' IBM Cobol with some CICS experience. This is a ground floor opportunity for programmers who wish to move into systems programming as there is no in-house systems back up at present.

Careers in Scientific Computing and Electronic Engineering

CHALLENGING OPPORTUNITIES TO WORK ON:

- * Logic Design
- * Microprocessors
- * Real-Time Programming
- * Networks
- * Accelerator Control Systems
- * Microdensitometers

The Daresbury Laboratory, located in the North Cheshire countryside, is developing national facilities in the fields of computer networking, atomic, molecular and biological sciences, nuclear physics and computational science. The facilities include a Central Computing Service, a Synchrotron Radiation Source, a tandem van de Graaff accelerator for Nuclear Structure studies and a microdensitometer service.

The exploitation of these facilities requires first-class computing support. Computers at the laboratory include a CRAY-1S, NAS AS 7000, QRC 4000s, PDP-11 Perkin-Elmer and Data General Novas.

WE REQUIRE

COMPUTER NETWORKS

A software Engineer to join a small team developing communications software for interactive terminal, graphics and remote job entry access to the SERCs computing centre using microprocessor based communications hardware, and mini-computer packet switches and front-end processors. For further details contact Mr. E. Owen, Warrington 65000 ext. 218. (Ref. No. CL/778A).

ACCELERATOR CONTROL SYSTEMS

A computer control systems specialist to join a small team developing the control system for the Synchrotron Radiation Source (a 2 GeV electron storage ring) and its experimental beam lines. The system is based on Perkin-Elmer 18 and 32 bit computers. Experience in programming in both assembler and high level languages (especially RPL/2), also in digital interface hardware and microprocessor applications, would be advantageous. For further details contact Dr. D. E. Poole, Warrington 65000, ext. 210. (Ref. No. DL/778B).

DATA ACQUISITION (HARDWARE)

An Electronics Engineer to join a team working in the areas of data collection and computer communications. The successful applicant will be involved in the specification and design of up-to-date with the increasing demands of scientific research. Experience of digital electronics work would be an advantage. For further details contact Mr. J. R. Alexander, Warrington 65000, ext. 388. (Ref. No. DL/777).

MICRODENSITOMETERS

An applications programmer to develop programmes (mainly in FORTRAN) and to supervise day-to-day operation of the microdensitometer service which involves the digitisation of photographic images and subsequent computer processing for measurement, display and pattern recognition purposes. For further details contact Dr. M. Elder, Warrington 65000, ext. 380. (Ref. No. DL/776C).

The vacancies are at Scientific Officer or Higher Scientific Officer level on the salary scale £5,176 to £5,994 or £6,330 to £6,588. Applicants should have a good honours degree (or its equivalent) in an appropriate discipline, but post-graduate experience in the relevant field will be necessary for an appointment to the higher graded posts. There is a non-contributory superannuation scheme, a generous leave allowance and a flexible working hours scheme. Assistance with removal expenses may be allowed in appropriate cases.

CLOSING DATE: 26th JANUARY 1982.

Please telephone Warrington 65000, ext. 467 for an

application form, or write quoting the appropriate

reference number to:

24 HOUR ANSWERING SERVICE (0423) 55311

SYSTEMS ANALYSTS

Systems Analysts are required at various grades to fulfil the requirements of our systems development plan. Two analysts are likely to be allocated to mainframe system development and others to Distributed Data Processing systems.

*SENIOR ANALYSTS

to £11000
to £9000

*ANALYSTS

Proven experience in the design, development and successful implementation of projects is essential. Candidates should have at least three years analysis experience preferably in an IBM installation. Additional experience of programming, and/or other management services functions would prove of use. (ICW/B201).

PROGRAMMERS

Two programmers are required. These should have experience in an IBM installation using PL/1 or COBOL. Projects currently in programming make use of CICS/VS and DL/1. A Distributed Data Processing Team uses 8100 COBOL, DPPX and DTMS.

*SENIOR PROGRAMMERS

to £10000
to £8500

*PROGRAMMERS

At least two years relevant programming experience is essential. (ICW/8202).

An Imperial career under George III.

We are now launching the first part of a new life assurance system, running under George III/DME. This is a new ICL 2956 installation.

So it is with assurance that we offer four experienced persons the opportunity of careers with Imperial Life.

They will help us plan and establish a sound operational base. They will look beyond basic salary to the considerable benefits offered by a first class assurance company.

First Class Benefits.

Generous mortgage facilities. Season ticket and car loan schemes. Subsidised luncheons. Excellent life assurance and pension cover. Where necessary, assistance with relocation expenses. And all this in Guildford, one of the nicest parts of Surrey.

Operations Manager c. £11,000.

Responsible to the Department Head for establishing operational schedules and procedures, maintaining on line and batch production services, and managing approximately 10 operational staff.

This key appointment requires a minimum of 5 years' experience in computing operations, at least 2 at manager level, an in-depth knowledge of ICL hardware and software routines and George III, preferably under DME. Exposure to VME/B would be an added advantage.

Emphasis will be on high professional standards and sound managerial experience.

Systems Programmer c. £9,500.

To generate, implement and tailor installation software for the operation of the mainframe and associated terminal network and to give technical support to the programming team. Substantial COBOL and George III/DME experience is essential together with a sound knowledge of ICL utilities and Drive based TP software.

Qualities of enthusiasm and drive, coupled with good communication skills are essential.

2 Shift Leaders c. £7,500+

Responsible to the Operations Manager for the effective running of the shift, including the training and supervision of junior operators. A two shift system will operate Monday to Friday (with some weekend working at the month end). We would expect 3 years' operating experience as senior operator/shift leader on ICL equipment (on 2900 mainframe). Sound knowledge of George III/DME at operational level is essential.

Please write or telephone for an application form or send a c.v. with details of age and salary to Eileen Wood at Guildford (0483) 71255.

LEARN AS YOU EARN TRAINING IN CICS AND DL/1 NEW JERSEY, USA

Afia is an international insurance corporation with business in 80 countries around the world. Afia deals in 130 currencies daily, has 11 data centres all with IBM 370 or 4300 hardware and is virtually recession proof. Established in 1918 as a consortium of five major American Insurance companies Afia is expanding its DP facilities significantly and consequently seeks several staff for its Wayne, New Jersey headquarters.

ANALYST PROGRAMMERS TO \$35,000

Candidates should have a minimum of 4 years' mainframe Cobol experience (less if you have a computer science degree). Practical experience of CICS and DL/1 is an advantage but training will be provided to candidates who can demonstrate sound programming skills. Design and/or on-line experience is of special interest.

CPI HAVE BEEN RETAINED TO CONDUCT INITIAL INTERVIEWS — LONDON — JANUARY 18-22

These will be followed by meetings with the client in early February. These are permanent positions and offer relocation expenses plus full medical insurance.

To arrange your confidential interview phone Sue Ashby on 01-836 6775 weekdays or 0844 53531 evenings and weekends.

International opportunities also available. Afia is also seeking a number of highly experienced technical specialists for various locations. CICS and DL/1 are mandatory for some vacancies. Other positions require Hardware/Software evaluation skills.

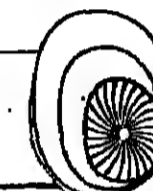

Wayne N.J., world headquarters for Afia, is a pleasant suburban community just 30 minutes from Manhattan. Afia employees enjoy a modern office environment, cafeteria and social club which includes bowling, darts, etc. Wayne is conveniently located for housing, schools, shopping, etc. plus all kinds of leisure activities such as skiing and watersports.

CHIEF ANALYST

LONDON c.£14,000+ MORTGAGE
A Chief Analyst with significant experience and commercial awareness gained within the Financial sector is required by a major Bank. The successful applicant will have the drive and initiative to lead a large team and see important projects from inception to completion. Professionally qualified or a Graduate and probably aged around 30, this could be your chance of real responsibility and a really excellent benefits package. Ref: R3454

SENIOR ANALYST

HERTS. c.£12,000
An opportunity to join an expanding department utilising some of the most sophisticated hardware and software currently available. If your background has involved plenty of user contact and development of your own commercial awareness and inter-personal skills our client offers the chance to exploit your abilities to the full in an IBM environment. Benefits are as would be expected from a major Company who are a leader in their field. Ref: R3454

SENIOR ANALYST/PROGRAMMER

CITY c.£12,000+ MORTGAGE
A leading City Bank is seeking an experienced Analyst/Programmer to augment its Data Processing department which is currently utilizing Wang equipment for the development of financial and integrated Word Processing systems. This is an excellent opportunity for involvement in all stages of Systems design, programming and implementation with very definite promotional paths open to the right person. A sound COBOL or BASIC programming background is required and experience of financial or banking applications would be particularly welcome. A superb company benefits package is offered including mortgage subsidy. Ref: C3994

PROGRAMMERS

LONDON To £9,500
A major manufacturing company is seeking two experienced Programmers to enhance its London-based development team. The requirement is for persons with two or more years' MACRO experience with DEC equipment working under REX, RT11 or RT12, with some experience in industrial applications being an added advantage. These are excellent opportunities for progression within a development environment with a company offering a good basic salary plus excellent benefits which include a Profit Sharing scheme and where necessary re-location. Ref: C3305

PROGRAMMERS

BERKS £7,000-£10,000+ BENEFITS
Berkshire currently offers some exceptional opportunities for people with COBOL experience. Three major companies are expanding their DP facility and require programmers at all levels with on-line and structured programming experience. If you are familiar with HP 3000 or IBM 4300 Database software ring Targa immediately for an introduction to these superb positions. Ref: R3467

Targa

RPG

LONDON: £8,000-£13,000
Demand for Programmers and Analyst/Programmers with RPG II or RPG III experience still exceeds supply. We are in touch with many clients in industries including Banking, Distribution, Manufacturing and Software Houses offering a choice of a wide range of application areas. Make 1982 the year your career took off — call Targa for an early interview. Ref: RGEN

ANALYST/PROGRAMMERS

CITY c.£10,000
Our client, a City based commodities house, currently utilizing DEC equipment working under RSTS, requires further Analyst/Programmers with sound experience of BASIC and/or BASIC-2. An applications background involving financial or general commercial work would be advantageous but is not essential as a good knowledge of the programming/software disciplines is of prime importance. A salary commensurate with experience will be paid, plus generous company benefits. Ref: C3719

ENGINEERS

BERKS c.£10,000
A highly successful manufacturing company is seeking experienced engineers to work in the development of microprocessor control systems. These are excellent opportunities for persons with a degree or equivalent who have at least 3 years' experience either in micro-computer software or with micro applications and circuit design. Ref: C3704

ANALYST

KENT £10,000+ MORTGAGE
You may currently be an Analyst/Programmer who aspires to his or her first position involving Analysis only. Our clients are an Insurance Company who are developing a Real-time system using Data base facilities and supporting several remote locations. If you are currently frustrated in the search for a full Analyst role then this could be you — excellent benefits including MORTGAGE. Ref: R3095

SENIOR PROGRAMMERS

ESSEX c.£9,500
An Essex-based company has a requirement for experienced PROGRAMMERS to work in a busy but interesting ICL environment. Our clients handle a large volume of the transactions for the London insurance market therefore an insurance or financial applications background would be an advantage. A minimum of 3 years' COBOL experience, preferably using ICL equipment is required, allied with the capability to supervise and motivate other programmers. Further programming vacancies occur at other levels and applications are invited from those with slightly less experience. All positions attract an excellent company benefits package. Ref: C3640

SYSTEMS ANALYST & PROGRAMMER

ESSEX £9,000
Our client, heavily committed to the implementation of new systems involving manufacturing and associated applications, has a requirement for a Systems Analyst and Programmer for their development team. 3 to 4 years' experience are required for the Analyst position and a sound ICL COBOL background, with possibly FILETAB for that of Programmer. As well as an excellent salary, related to experience, an exceptional benefits package applies, which can in certain circumstances include re-location. Ref: C3399
